To maximise shareholders' value. Bank Mandiri applies integrated risk management through the Enterprise Risk Management (ERM) framework. This framework aligns strategic planning. risk appetite. execution. risk assessment, and performance evaluation into a unified process. Its objective is to create value added for the Bank and its shareholders while supporting the successful execution of strategic plans outlined in the Corporate Plan. At Bank Mandiri. ERM implementation adopts a two-prong approach. comprising risk management through capital and risk management through operational activities, as illustrated in the diagram below.

In the application of the two-prong approach. there are 4 (four) main components that function as supporting pillars. including:

1. Organization & Human Capital

The Risk Management Unit (SKMR) of Bank Mandiri is responsible for managing all risks across the Bank. including developing supporting tools needed for business processes and risk management. Each business unit is also supported by a risk counterpart that participates in the four-eye credit approval process. As risk management is a shared responsibility across the Bank. its effectiveness relies on strong risk awareness and adequate technical capabilities throughout the organisation. To support this. Bank Mandiri continuously enhances employee competence through regular training at the Risk Management Academy. knowledge transfer from international experts, annual socialisation programs. discussion forums. internships, and other initiatives aligned with corporate culture internalisation. The Bank's Risk Management structure operates under the Risk Management Directorate. which oversees Independent Risk Management and Credit Approval Risk. comprising Wholesale Risk and Retail Risk. The Directorate is led by the Director of Risk Management and supported by the SEVP Risk Management.

2. Policies and Procedures

The Risk Management Policy (KMNR) is set as the main guidelines on the implementation of risk management at the operational level and the capital management at the Bank covering:

a. Prudential Principle. which entails capital adequacy. fulfillment of prevailing laws and regulations, and an early warning system.
b. Risk Management. which entails Risk Appetite. Risk Profile. Bank Soundness Rating. Stress Testing. Recovery Plan, and Resolution Plan, as well as Integrated Risk Management.
c. Risk Management for each type of risks. which entails processes of risk identification. measurement. oversight, and control.
d. Risk Oversight. which entails monitoring of activities/ methodologies of risk management at Bank Mandiri, and the Internal Control System.

This Risk Management Policy is the basis for making procedures and technical guidelines concerning risk management at Bank Mandiri.

3. System & Data

The risk management system is developed to support more efficient business processes. enabling faster decision-making while maintaining prudent principles. Bank Mandiri has implemented the Integrated Processing System and Loan Origination System to improve credit process efficiency and ensure data quality across the Corporate. Commercial, and Retail segments. To enhance collection productivity in the Consumer and Retail segments. the Bank applies the Integrated Collection System. For managing trading book risk and FRTB reporting. Bank Mandiri uses the Summit System and the New Treasury Core System (NTCS). Meanwhile, the Balance Sheet Manager is utilized to manage banking book risk and liquidity risk in treasury and liability management activities. As an integrated risk information system for assessing the Bank's Risk Profile and Soundness Level. individually. consolidated, and integrated. Bank Mandiri has implemented the web-based Risk Assessment Consolidation Generator System (RACER). enabling risk assessments to become more effective. efficient, accurate, accountable, and supported by stronger access controls.

4. Metodologi/Model & Analytics

Bank Mandiri continuously applies risk measurement aligned with international best practices by using both quantitative and qualitative approaches. including the development of risk models such as rating. scoring. Value at Risk (VaR). portfolio management. stress testing. fraud models, and other models that support judgemental decision-making. These models are validated by an independent Model Validator Unit to ensure their quality and validity. In addition. model risk is managed through a Model Risk Management framework under the Model Governance Unit. ensuring adequate controls over all model components used in business processes and decision-making. This model management framework includes:

a. Model Inventory
Through the model inventory. Bank Mandiri maintains a comprehensive record of all models in use. This inventory includes key information such as statistical results. model purpose. model owner. model developer. model user. validation outcomes, and related documentation. The model inventory system also shows each model's position within the Model Lifecycle. covering the stages of model initiation. development. validation. implementation. usage, and monitoring.

b. Model Risk Assessment
An assessment of the level of risk of the models based on quantifiable observations about the materiality and complexity of the models.

c. Model Control
The monitoring and control of models are carried out through continuous assessment. This includes model validation. both first-time validation and on-going validation. First-time validation is performed after model development to ensure the model complies with academic standards. best practices, and regulatory requirements. On-going validation is conducted periodically to ensure that the model continues to perform reliably and remains fit for its intended purpose.

With the adoption of the model management framework. there is a segregation of duties between the first line (model owner. model developer, and model user). the second line (model validator and model management guiding unit), and the third line (Internal Audit) based on three-line models.

Bank Mandiri also continues to implement Basel II. III, and ERM in compliance with the Financial Services Authority and the BCBS (Basel Committee on Banking Supervision) as well as the best practices. which cover Credit Risk. Market Risk. Liquidity Risk. Interest Rate Risk on Banking Book Position. Operational Risk. Capital Management, and Internal Capital Adequacy Assessment Process (ICAAP), as well as Stress Testing and Recovery Plan.

CREDIT RISK MANAGEMENT

Bank Mandiri manages and mitigates credit risk at every stage of the lending process.

In the Wholesale segment, credit risk management begins with market targeting based on the Loan Portfolio Guideline, which classifies industry sectors into Industry Classifications (attractive, neutral, selective, cautious) according to their outlook and portfolio quality. The Bank also sets Industry Limits to minimise credit concentration risk in specific sectors. To ensure a strong pipeline of quality prospective borrowers, the Bank conducts pre-approval processes using various credit risk tools, starting with Clearance Process to review assesses reputation,business operations, and financial condition. This is followed by a credit risk assessment that includes rating, financial analysis, and borrower potential, before a final decision is made by the Credit Approval Authority through the four-eyes principle involving both the Business Unit and the Credit Risk Management Unit independently. After loan disbursement, regular monitoring is carried out through quality review and early warning signals to detect potential issues early and prepare targeted action plans, including collection, recovery, or restructuring activities.

For the Retail segment. which targets the mass market. credit processes are more automated. A credit risk scorecard, aligned with the Risk Acceptance Criteria of each product. processes loans through an automated workflow system (Loan Factory). Monitoring is performed at the portfolio level through Portfolio Quality Reviews. followed by collection and recovery process for non-performing portfolios.

To anticipate macroeconomic uncertainties, a what-if analysis of wholesale and retail portfolios is carried out through a process of stress testing and sensitivity analysis using certain macroeconomic scenarios.

In all lending activities. Bank Mandiri prioritizes prudence by employing credit analysis through independent business units and credit risk units. Credit management is governed by the Credit Policy (KPKD). operationalized through Credit Standard Procedures (SPK) and Product Manuals. ensuring an end-to-end risk management process.

At the borrower level. credit concentration risk is managed by monitoring the Legal Lending Limit (LLL), and the application of Management Limits for large business groups. In general. credit processes and risk management are carried out end-to-end and integrated across the Business Unit. Credit Operation Unit, and Credit Risk Management Unit.

The Bank regularly reviews and updates its credit policies in general. credit for segment-specific procedures, and risk management tools. These guidelines provide comprehensive credit risk management instructions for identifying. measuring, and mitigating credit risk in the end-to-end credit process starting from determining the target market. credit analysis, approval. documentation. credit withdrawal. monitoring/supervision. to the process of resolving/ restructuring non-performing loans.

To enhance its social role and awareness of environmental risks. Bank Mandiri has integrated Environmental. Social, and Governance (ESG) aspects into the Industry Acceptance Criteria Technical Guidelines. These guidelines help evaluate and select prospective borrowers who meet the required qualifications and have implemented ESG principles in their business operations. This initiative aligns with OJK Regulation No. 40/POJK.03/2019 on the Asset Quality Assessment of Commercial Banks. which requires that a debtor's business prospects also consider environmental preservation efforts. In addition. Bank Mandiri has developed a Sustainable Finance Action Plan to strengthen its contribution to environmental conservation. in accordance with OJK regulations on Sustainable Finance for Financial Institutions. Issuers, and Public Companies. These efforts reinforce the Bank's commitment to promoting sustainability and responsible governance practices.

In principle. credit risk management at Bank Mandiri is implemented both at the transactional and portfolio levels. At the transactional level. the Bank applies a four-eyes principle. ensuring that every credit approval involves independent evaluations by the Business Unit and the Credit Risk Management Unit to achieve objective decision-making. This process is executed through the Credit Committee, adhering to the established authority limits. with credit approvals determined through the Credit Committee Meeting mechanism.

Credit risks from borrowers and products are accounted for through impairment loss provisions under PSAK 71. effective since 1 January 2020 (codified as PSAK 109 as of 1 January 2024). These provisions are monitored through the cost of credit indicator.

Market risk management at Bank Mandiri is conducted by an independent unit following the principle of segregation of duties. ensuring a clear separation of functions and responsibilities among the front office. middle office, and back office. The Market Risk Management Organization is divided into two sections; Market Risk Management – Trading Book, and Market Risk Management – Banking Book.

The framework for and governance of market risk management at Bank Mandiri consist of:

Bank Mandiri's Risk Management Framework is designed by considering both internal and external factors, including but not limited to the Bank's business dynamics, regulatory requirements, advancements in methodologies and best practices, as well as risk data. The authority and responsibilities for implementing risk management are defined in the Risk Management Policy (RMP). Specific guidelines for managing market risk in the trading book and banking book portfolios are detailed in the Standard Procedure of Treasury (SPT) and Standard Asset & Liability Procedure Management (SP ALM).

Management and Mechanism of Market Risk Measurement – Trading Book

Trading book market risk is the risk arising from potential losses resulting from trading book instrument activities, covering interest rate risk, exchange rate risk, credit spread risk, default risk, equity risk, and commodity risk that may adversely affect the Bank. Bank Mandiri manages market risk by adhering to the principle of segregation of duties, ensuring a clear separation of functions and responsibilities in treasury unit trade transactions, which consist of:

Segregation of Duties Principle

Unit Front Office (Treasury)	Unit Middle Office (Risk Management)	Unit Back Office (Treasury Operation)
Executing Transactions	Monitor. assess. and repost risks arising from all trading activities carried out by the front office unit.	Recording and valuation of all exposures in trading activities are conducted on a daily basis using the established methods and market price sources.

The measurement of trading book risk is conducted in accordance with regulatory requirements and several internal indicators. including Value at Risk (VaR). sensitivity simulations, and stress testing. Risk monitoring is carried out by applying various types of limits on treasury activities. These limits are set in a tiered manner. from the dealer level to the bank-wide level. to ensure that trading exposure remains consistent with the risk appetite established by management.

Management and Mechanism of Market Risk Measurement – Banking Book

Banking book market risk refers to the risk arising from changes in interest rates and exchange rates related to banking book activities. which can impact the Bank's profitability (earnings perspective) and the economic value of its capital (economic value perspective). Bank Mandiri manages this risk by optimizing its balance sheet structure to achieve maximum returns within an acceptable risk level. Management also involves setting limits aligned with internal policies and prevailing laws and regulations. which are periodically monitored by the relevant work units.

LIQUIDITY RISK MANAGEMENT

Liquidity risk arises from the Bank's inability to meet its due obligations through cash flow financing and/or high-quality liquid collateral assets without causing disruption to the Bank's operations and financial condition.

Liquidity risk can be divided into two categories:

1. Funding Liquidity Risk. which is a risk caused by the Bank's inability to liquidate its assets or secure funding from other sources. The inability to secure cash flow financing that causes liquidity risk can be explained by (1) the Bank's inability to generate cash flow from productive assets or asset liquidation including liquid assets; and/or (2) the Bank's inability to generate cash flow from funding. interbank transactions, and received loans.
2. Market Liquidity Risk. which is a risk caused by the Bank's inability to close out certain positions at a market price due to inadequate market liquidity conditions or disruptions in the market.

Liquidity Risk Management is carried out in the following 4 (four) stages:

1. Identification. to determine risk and sources of liquidity risk and the problems it poses so that it may be controlled and mitigated. The identification of liquidity risk can be conducted by identifying balance sheet components and administrative account components that may affect the Bank's liquidity and identifying market parameters such as crises and other things.
2. Measurement. to measure liquidity risk. which is done using 2 (two) approaches. namely (1) Nominal Stock-Based (Liquidity Ratio) which entails the use of various financial ratios as an indicator of the level of liquidity risk and (2) Flow-Based (Liquidity Gap Analysis).
3. Monitoring is conducted by tracking liquidity risk indicators against the established limits.
4. Control. which is an activity that aims to minimize the impact of liquidity risk by considering the level of income earned.

Tools and Method

Bank Mandiri manages liquidity risk by measuring the liquidity risk using some indicators. such as primary reserve (Minimum Statutory Reserves. Macroprudential Liquidity Buffer, and Cash). secondary reserve (liquidity reserves). Macroprudential Intermediation Ratio (MIR). Liquidity Coverage Ratio (LCR), and Net Stable Funding Ratio (NSFR).

To manage liquidity risk in a measured and comprehensive manner. Bank Mandiri implements the following strategies:

1. Determine limits that refer to internal provisions and regulatory provisions.
2. Perform periodic liquidity risk stress testing to determine the impact of changes in market factors and internal factors in extreme conditions (crises) on liquidity conditions.
3. Arrange and conduct a periodic review of the Liquidity Contingency Plan (LCP) and Recovery Plan that regulate the Company's procedure for handling worsening liquidity conditions including alternative financing strategies such as sale/purchase of FX. Money Market instruments, and Interbank Securities Repo. Government Bond sale, and the use of Standing Facility and repo of the Bank Indonesia. The determination of liquidity conditions and financing strategies in the LCP and Recovery Plan has considered internal and external conditions.
4. Monitor external indicators such as Indonesia Overnight Index Average (IndONIA). USD Interbank. Rupiah interest rate. yield from SUN and UST with a 10-year tenor. Outstanding IDR banking liquidity. USD/IDR exchange rate. credit spread of default swaps (CDS). Composite Stock Price Index (CSPI), as well as current market information. This monitoring aims to increase awareness of less stable economic conditions. either due to a global crisis or various domestic issues.

Liquidity Adequacy Ratio

Bank Mandiri's liquidity adequacy can be identified through Liquidity Coverage Ratio, Net Stable Funding Ratio, Macroprudential Intermediation Ratio (MIR), and Liquidity Reserves. The Liquidity Coverage Ratio (LCR) is a ratio of High-Quality Liquid Assets (HQLA) to the estimated net cash outflow within the next 30 (thirty) days in a crisis scenario. The LCR aims to improve the short-term liquidity of a bank during a crisis. As of December 2025, Bank Mandiri's LCR reached 137.40% (Bank Only) and 140.19% (consolidated), above the minimum LCR fulfillment target set by the Regulator which was 100%.

Another indicator used by Bank Mandiri to determine liquidity adequacy is the Net Stable Funding Ratio (NSFR). The Net Stable Funding Ratio (NSFR) is a ratio of available stable funding to required stable funding. As of December 2025, Bank Mandiri's NSFR reached 109.95% (Bank Only) and 111.09% (consolidated), above the minimum NSFR fulfillment target set by the Regulator which was 100%.

The Macroprudential Intermediation Ratio (MIR) is a ratio of distributed credit and corporate commercial paper fulfilling certain requirements and are owned by the Bank to third-party funds, commercial paper fulfilling certain requirements issued by the Bank, and loans fulfilling certain requirements received by the Bank. As of December 2025, Bank Mandiri's RIM (Bank Only) reached 84.52%.

In addition, Bank Mandiri has liquidity reserves, which serve as a liquid asset above minimum statutory reserves that are used to meet unscheduled liquidity needs. In managing its liquidity reserves, Bank Mandiri sets a limitation in the form of safety level, which is a projection of liquidity reserves for the next 1 (one) month. As of December 2025, the Bank's liquidity reserves were above the safety level.

RISK OPERATIONAL MANAGEMENT

Operational risk arises from inadequacies and/or failures in internal processes. human errors. system malfunctions, and/or external events that impact the Bank's operations. including risks related to cyber security. Operational risks can lead the emergence of other risks. such as reputational risk. strategic risk. legal risk. market risk. credit risk. compliance risk, and liquidity risk. Effective and consistent management of operational risk is crucial to minimizing the likelihood of these interconnected risks.

Operational risks are inherent in every product, activity, and operational process of the Bank as part of its business activities. These risks are also the responsibility of every individual within the Bank. The Risk & Control Owner holds the primary responsibility for implementing optimal operational risk management to minimize these risks.

In developing an Operational Risk Management Strategy. the Bank applies the following principles:

1. Long-term oriented to ensure the Bank's business continuity. by maintaining the Bank's risk exposure managed in a controlled manner in accordance with the Bank's internal regulations, as well as prevailing laws and regulations and other stipulations.
2. Comprehensive and extensive in all parts of the Bank, and remains focused on material and or significant risks and the most effective mitigation processes.
3. Proactive in identifying and detecting potential control weaknesses and the occurrence of risks hence risks can always be minimized.
4. Comply with the provisions for the fulfillment of capital adequacy operational risks in accordance with regulations and the development of risks appetite.

Operational risk management is implemented through a layered lines-of-defense model. where each line of defense has distinct roles and approaches to addressing operational risks. This framework is based on the principle of combined assurance. ensuring that a balance between risk & reward is also achieved.

The Risk & Control Owner is fully responsible for managing risks and implementing daily internal controls to ensure that existing risks are mitigated. This includes continuously improving control designs to align with changes in processes.

To ensure effective operational risk management. the process is carried out in four stages:

1. Identification, a process to identify potential inherent risks to a product/activity/process. taking into account internal and external factors. such as data of operational risk incidents. regulatory changes, and audit findings. This stage includes identifying risk mitigation and control measures.

2. Assessment. which is the process of evaluating by considering the potential impact and likelihood of a risk can inherently occur. This aims to find out which risks are more material/significant compared to others to ensure more focused control measures can be prepared. In addition, an assessment is also carried out on quantitative control through control testing activities to determine whether the control design regulated in the prevailing regulations at the bank has been effectively implemented (operating effectiveness) and or can still be effectively used (design effectiveness). The assessment produces a residual risk value which is the risk value after considering the controls.

3. Monitoring, a proses to monitor risks that have been identified and assessed for their likelihood. Risk monitoring is carried out at all times in every work unit and by its members. The activity follows a hierarchy and is done collectively. including by the unit's head, adhering to the applicable procedures. Monitoring activities include the early warning systems in existing tools/reporting.

4. Risk Control/Mitigation. which is a process to control and mitigate before a risk event occurs through the implementation of adequate and consistent control procedures, as well as implementing follow-up actions plans on control weaknesses found (thereby potential risks occur) in the monitoring process and follow-up on incidents. The purpose of this process is to ensure that residual risk to the Bank is kept to a minimum. Controls must be consistently implemented according to existing control designs but must also be continuously reviewed to ensure existing control designs are still effective for mitigation of emerging risks.

Operational Risk Management Tools

To enable work units in implementing operational risk management. the Bank provides the following risk management tools:

1. Risk & Control Self Assessment (RCSA)
   RCSA is a register of key risks and control measures that inform risk-based control testing to identify potential weaknesses as early on as possible. The tool allows its user to maintain minimum level of residual risks and to take necessary mitigation measures.
2. Loss Event Database (LED)
   A database of operational risk incidents that are recorded on a risk-based approach with the aim of being lesson learned. monitoring follow-up remediation and future improvements, and as one of the components of the calculation of operational risk capital (regulatory capital charge) of the Standardized Approach (SA) method.
3. Key Indicator (KI)
   KI contains key risk indicators (KRIs) and Key Control Indicators (KCIs) and serves as an early warning signal that encourages early control actions to be undertaken.
4. Issue & Action Management (IAM)
   IAM is a tool to monitor if known issues are follow-up using a range of activities. such as control testing. incidents. key indicators, and self-identified issues.
5. Capital Modelling
   A tool to calculate regulatory capital charge in accordance to applicable regulations and as part of operational risk mitigation.

To improve its operational risk management effectiveness. the Bank has developed an integrated Operational Risk Management System that covers all of the tools above. The system is also implemented in all work units at the head office and regions.

The output of operational risk management activities is an Operational Risk Profile Report that describes operational risk exposure. The report is submitted periodically to the Bank's Board of Commissioners and Board of Directors, and supports the boards' active role in operational risk management. The report also informs the Bank's risk management report to regulators as part of Risk-Based Bank Rating (RBBR) in accordance with applicable provisions.

Operational Risk Management Organization

Operational risk management is carried out by all of the Bank's elements. including the Board of Directors with active supervision from the Board of Commissioners. The Boards understand existing risks and have a key role in supporting and overseeing risk management activities at the operational unit level.

The operational risk management organization and their duties and responsibilities are:

The risk management mechanism. encompassing the processes of identification. measurement. monitoring, and control, adheres to the applicable risk management regulations. Each work unit responsible for products and/or activities is required to identify and manage risks comprehensively. including but not limited to legal risks. which are inherently present in every product or activity created or carried out by the company. This is to ensure that legal risks do not have widespread impacts or trigger other risks. such as reputational risks.

The legal risk management efforts implemented by Bank Mandiri. both preventive and corrective, are deemed sufficient to protect the Bank's legal interests and minimize significant financial impacts. This is reflected in the 2025 Legal Risk Profile Report. which achieved a "Low" risk rating.

The Mechanism for Managing Reputational Risk

Reputational risk is managed through monitoring. supervision. handling. and resolution mechanisms coordinated by the Corporate Secretary Group. in accordance with the Corporate Secretary Standard Guidelines. Based on these guidelines. there are four stages of reputational risk management: identification. measurement. monitoring. and control. These stages are reflected in each Corporate Secretary activity with potential reputational risk. such as the Bank's activities as a publicly listed company.

In such activities. reputational risks can be identified. such as delays. errors. or inconsistencies in reporting. These may stem from factors such as individuals lacking knowledge or understanding of disclosure obligations or insufficient supervision and review by supervisors. To control these risks. Bank Mandiri implements mitigation measures. such as maintaining a checklist of disclosure obligations and ensuring supervisors carry out thorough checks and reviews.

Should reputational risk incidents occur and result in negative perceptions of the Bank. mitigation activities can be carried out to reduce the impact. One method involves publishing positive articles in print. online. and electronic media. as well as sharing positive content on social media to neutralize the negative perceptions. These positive articles may highlight the Company's business and social activities or its support for government programs. in compliance with the Corporate Secretary Standard Guidelines.

MARKET RISK EXPOSURES

Market Risk Disclosure Using Standard Methods and Internal Models

The Bank regularly calculates the Capital Adequacy Ratio (CAR) using a Standardized Method that is reported monthly to the OJK. while for the consolidated position with its subsidiaries. it is reported quarterly. This reporting aims to improve the Bank's quality and quantity so the Bank will be able to absorb potential losses due to financial and economic crises.

Table 7.1 Disclosure of Market Risk using a Standardized Method

For internal purposes. Bank Mandiri also has calculated using an Internal Method. The CAR calculation using an internal method is done by applying Value at Risk (VaR). a value describing the maximum losses the Bank can handle because of market movements affecting the Bank's risks in normal market conditions with a 99% confidence level. To obtain the VaR. the method used is Historical Simulation. Realization of Value at Risk of Bank Mandiri in 2025 is as follows:

Table 7.2 Disclosure of Market Risk using an Internal Model (Value at Risk/VaR) - Bank Only

Disclosure of Interest Rate Risk in Banking Book (IRRBB) Exposures

The Interest Rate Risk in The Banking Book is a risk due to movements of interest rates in the market that run counter to the position of the Banking Book. which potentially impacts the capital and income of the Bank in the current period or the future.

According to OJK Circular No. 12/SEOJK.03/2018 on "Implementation of Risk Management and Risk Measurement using a Standardized Method for Interest Rate Risk in The Banking Book for Commercial Banks". the Bank uses 2 (two) methods in calculating the IRRBB:

1. Calculation based on changes in the economic value of equity. hereafter EVE. which is a method that measures the impact of interest rate changes on the economic value of equity of the Bank; and
2. Calculation based on changes in net interest income. hereafter NII. which is a method that measures the impact of interest rate changes on the income of the Bank.

Based on the sensitivity analysis at the end of December 2025. the impact of interest rate changes on the economic value of equity and the net interest income is as follows:

1. **Table 7.3a Disclosure of Interest Rate Risk in Banking Book (IRRBB) Exposures - Bank Only**
2. **Table 7.3b Disclosure of Interest Rate Risk in Banking Book (IRRBB) Exposures - Bank Consolidated with Subsidiaries**

In addition to the disclosure of IRRBB exposures. the Bank also discloses foreign exchange risk. The foreign exchange risk arises because of market movements that run counter to Bank Mandiri's foreign exchange position. This risk comes from the Bank's assets and liabilities in the balance sheet in foreign currencies. from foreign exchange transactions with customers and counterparties causing open positions in the foreign exchange. or from a structural position in the foreign exchange due to capital participation.

All tables regarding Market Risk Exposures are presented in this Annual Report herein.

The Bank manages the LCR and NSFR ratios in accordance with the provisions of the Regulator. both individually and on a consolidated basis. above the minimum limit of 100%.

Bank Name : PT. Bank Mandiri (Persero). Tbk (Individual)
Report Position : December 2025

	Qualitative Analysis
1	Explanation about how the Bank defines IRRBB for risk measurement and control.
	The Interest Rate Risk in The Banking Book is a risk due to movements of interest rates in the market that run counter to the position of the Banking Book. which potentially impacts the capital and rentability (earnings) of the Bank in the current period or the future. The Bank uses 2 (two) methods in calculating the IRRBB. namely calculation based on changes in the economic value of equity. or ΔEVE. and calculation based on changes in net interest income. or ΔNII. The simulation of ΔEVE and ΔNII is performed according to interest rate shock in OJK Circular No. 12/SEOJK.03/2018 dated 21 August 2018. The Bank controls and mitigates interest rate risk using a recomposition of assets and liabilities or a hedging strategy.
2	Explanation about IRRBB strategic management and mitigation.
	The Bank adopts IRRBB control strategies that are in line with the Banks overall business strategies by considering the risk appetite and risk tolerance approved by the Board of Directors and Board of Commissioner. Meanwhile. in response to changes in the economic value of equity (ΔEVE). the IRRBB mitigation strategies are formulated based on the duration of the positions (average repricing maturity) of assets and liabilities. As of December 31. 2025. Bank Mandiri's individual ΔEVE was 7.09%. far below the level set by the Regulator of 15%. The decrease of ΔEVE compared to previous period was driven by the Banks internal strategy in managing assets & liabilities. specifically in optimizing liquidity.
3	Periodic calculation of the Banks IRRBB and the explanation about specific actions taken by the Bank to measure sensitivity to IRRBB.
	In ensure IRRBB is monitored properly. the Bank calculates IRRBB every end-of-month of the reporting period and reports and publishes the result for every quarter position per the prevailing provisions. The measurement of sensitivity to IRRBB is in accordance with OJK Circular No. 12/SEOJK.03/2018 dated August 21. 2018. which covers all Banking Book positions by looking at changes in economic value and earnings.

4	Explanation about shock scenario for interest rates and stress scenario used by the Bank to estimate changes in economic value and earnings.

IRRBB exposures calculation is based on 6 (six) shock scenarios for interest rates:

Scenario	Explanation	Estimation of Changes	
		Economic value	Earnings
Parallel Up	Interest rate shock that is parallel up	√	√
Parallel Down	Interest rate shock that is parallel down	√	√
Steepener	Steep interest rate shock in which short-term interest rates go down and long-term interest rates go up	√	
Flattener	Flat interest rate shock in which short-term interest rates go up and long-term	√	
Short Up	Interest rate shock in which short-term interest rates go up	√	
Short Down	Interest rate shock in which short-term interest rates go down	√	

5	Modelling assumption used significantly in the Internal Measurement System (IMS) – if any.

The Bank does not have any modeling assumptions that are used significantly in the Internal Measurement System (IMS).

6	Explanation about how the Bank hedges the IRRBB (if any). along with the relevant accounting treatment

The Bank makes hedging transactions on the interest rate risk position by considering risk appetite. business strategies. and projected future movements of market factors. The Bank does not apply the hedge accounting method in the hedging transaction accounting. The profit/loss arising from the hedging transaction is recorded in the Bank's profit/loss statement.

7	Comprehensive explanation about the primary assumptions of modelling and the parameters used to calculate ΔEVE and ΔNII.

The following are the primary assumptions of modelling used to calculate ΔEVE and ΔNII:

a. In the calculation of ΔEVE. cash flows are discounted but do not incorporate commercial margins. In contrast. the calculation of ΔNII incorporates commercial margins in the cash flows but does not apply discounting to those cash flows.
b. Non-Maturing Deposits (NMD) are liability products withdrawable on demand by customers as they do not have contractual maturities. For IRRBB measurement. NMD include savings and current accounts. In the calculation of ΔEVE and ΔNII. the initial step in determining average repricing maturities is performed by identifying core and non-core deposits of NMD products based on behavioral characteristics. The Bank subsequently applies a uniform slotting method to determine repricing maturities. For core deposits. the caps applied refer to SEOJK No. 12/SEOJK.03/2018 concerning Risk Management Implementation and Standardized Approach Measurement for Interest Rate Risk in the Banking Book for Commercial Banks.
c. Instruments with behavioral options. such as consumer loans. retail term deposits. and non-maturing deposits (NMD). have incorporated their material impacts on ΔEVE and ΔNII through the use of early prepayment models (for consumer loans). early redemption models (for term deposits). and behavioral analysis for NMD slotting. These models affect the repricing time profile of the instruments within the repricing gap. The early prepayment and early redemption models consider historical data on early settlement of the Bank's fixed-rate loans and early withdrawals of deposits.
d. The Bank does not apply any assumptions other than those stipulated in SEOJK No. 12/SEOJK.03/2018 concerning Risk Management Implementation and Standardized Approach Measurement for Interest Rate Risk in the Banking Book for Commercial Banks.
e. The Bank measures IRRBB across the entire banking book by grouping positions based on material currencies. The aggregation method for ΔEVE is systematically performed by summing the maximum ΔEVE loss from each currency that is material to the Bank.

Backed by sustainability key achievements, 2025 marked as a pivotal year in which Bank Mandiri strengthened the application of ESG principles in a more effective and integrated manner. The Bank continues to optimise its eight strategic initiatives under the three sustainability pillars to generate greater measurable impact, support sustainability targets, and advance the shift toward more responsible business practices.

Bank Mandiri further deepened its sustainable finance agenda by reinforcing the synergy between business operations and sustainability initiatives. The Bank's priority is to enhance tangible impact through green financing, sustainable operational efficiency, and strategic collaboration with various stakeholders to accelerate the transition toward a low-carbon economy. These efforts reaffirm Bank Mandiri's position as a catalyst for inclusive and resilient economic growth.

Going forward, the Bank targets full CRST coverage for its bank-only loan portfolio and will continue strengthening stakeholder partnerships to deepen the integration of environmental, social, and governance aspects across all business lines. Bank Mandiri remains committed to reinforcing its role as a Sustainability Champion and accelerating its contribution toward Indonesia's Net Zero Emission target before 2060.

SUSTAINABILITY STRATEGY

Bank Mandiri has set out its long-term strategy towards sustainability for the 2025–2029 period with the main aspiration of "Becoming Indonesia's Sustainability Champion for a Better Future." This aspiration is reflected through three key objectives: leading Indonesia's transition toward a low-carbon economy, achieving Net Zero Emissions (NZE) in operations by 2030, and catalyzing social growth with meaningful impact to support the achievement of the Sustainable Development Goals (SDGs).

To realize this vision, Bank Mandiri has developed an ESG Framework comprising three main pillars supported by eight strategic initiatives to be implemented throughout 2025–2029. This framework is designed to embed sustainability principles across all operational and business activities of the Bank, thereby generating significant positive impact on the environment, society, and the national economy.

The implementation of Bank Mandiri's sustainability strategy for the 2025–2029 period is also aligned with its business transformation direction, which focuses on integrated strategic growth and transformational leadership through ecosystem orchestration. Through this approach, Bank Mandiri aims to strengthen its role as a key driver of an inclusive and competitive financial ecosystem, balancing economic, social, and environmental performance. The integration of ESG principles is not only reflected in sustainable products and services but also embedded in risk management, governance, and the development of orchestrating leaders capable of creating long-term value for all stakeholders.

BANK MANDIRI SUSTAINABLE FINANCING FRAMEWORK

Bank Mandiri's Sustainable Financing Framework serves as a cornerstone for guiding the classification, assessment, and reporting of sustainable financing activities. It ensures that capital is channelled responsibly into initiatives that advance environmental stewardship and social development, while providing a clear structure for the issuance of sustainable financial instruments. The Framework is aligned with leading international standards and national regulations, remaining adaptable as global sustainability practices evolve.

The legal and regulatory references include the Green, Social, Sustainability, and Sustainability-Linked Principles issued by ICMA and LMA; Climate Bonds Taxonomy; European Union Taxonomy; ASEAN Sustainable Finance Standards; as well as national requirements such as POJK 51/2017, POJK 18/2023, and the Indonesian Sustainable Finance Taxonomy (TKBI). Each financing activity under the Framework follows a structured process for project selection, fund management, monitoring, reporting, and independent external review to ensure strong governance and transparency.

In addition, Bank Mandiri has established a Transition Finance Framework to support a gradual and responsible shift toward a low-carbon economy, reflecting the Bank's commitment to enabling industry transition while considering Indonesia's socio-economic landscape. Together, these frameworks strengthen the Bank's sustainable finance strategy, enhance stakeholder trust, and support national and global sustainability objectives.

The implementation of sustainable finance is further reinforced through the establishment of the ESG Group, a permanent unit under the Vice President Director that serves as the focal point and key coordinator for sustainability initiatives across the Bank. Further details regarding Bank Mandiri's Sustainable Financing Framework and the Bank's sustainability achievements for 2025 are presented in the Sustainability Report.

SUSTAINABLE FINANCING PRODUCTS

Sustainability Linked Loan (SLL)

To support clients in enhancing their sustainability performance, the Sustainability-Linked Loan (SLL) is designed to strengthen borrowers' sustainability profiles over the loan period without requiring financing to be allocated to specific sustainable projects. This financing scheme aligns loan terms with predetermined sustainability objectives, measured through Key Performance Indicators (KPI) and evaluated against Sustainability Performance Targets (SPT). Through this KPI-based mechanism, SLL not only promotes sustainability-focused initiatives but also provides incentives for borrowers to achieve the agreed ESG targets.

Sustainable Client Financing

This type of financing is provided at the client entity level to support business activities that promote environmental sustainability or transition toward a sustainable economy. The facility adheres to eligible activity criteria under the framework, in line with applicable regulations and international best practices. Clients qualify for this financing if their core business, or at least 90% of their revenue, is derived from activities that meet these eligibility criteria.

Green Loan

This facility is designed to finance projects and initiatives with positive environmental impact, aligned with the Green Loan Principles of the Loan Market Association (LMA). Since its launch in 2022, Bank Mandiri has acted as Mandated Lead Arranger in a US$300 million syndicated Green Loan supporting the lithium battery industry. In 2024, this commitment was strengthened through the provision of green credit facilities for the power and transportation sectors. Bank Mandiri serves as ESG Coordinator, providing Rp3.5 trillion in green financing to support the energy transition program and US$226 million for electric vehicle distribution and infrastructure development.

Green Mortgage

Bank Mandiri continues to innovate in developing financial products that support green property growth. This initiative reflects the integration of ESG principles into financial products through the Sustainable Banking pillar. As of December 2025, green-certified building loans reached Rp0.71 trillion, including retail financing through the Green Mortgage program, bringing Bank Mandiri's total sustainable portfolio to Rp316 trillion, an increase of 7.97% (yoy).

SUSTAINABLE FUNDING

Sustainability Bond & ESG Repo Framework

Bank Mandiri's Sustainability Bond and ESG Repo Framework are developed in alignment with the four core pillars of the Sustainability Bond Guidelines issued by the International Capital Market Association (ICMA, 2021), namely Use of Proceeds, Project Evaluation and Selection, Management of Proceeds, Reporting. These frameworks ensure that sustainability instruments issued by the Bank comply with global standards and support projects with environmental and social impact.

Green Bond Framework

Bank Mandiri's Green Bond Framework, which governs the issuance of Rupiah-denominated Green Bonds, complies with OJK Regulation No. 60/2017 and also adopts the four pillars of ICMA-2021. Under this framework, Bank Mandiri established its Sustainable Green Bond Public Offering (PUB) Program I at Rp10 trillion, with the first phase issued in 2023. The allocation of proceeds was verified through an independent Second Party Opinion (SPO) from SDGs Hub UI.

Sustainability Bonds

In 2021, Bank Mandiri issued its inaugural Sustainability Bond to finance or refinance eligible environmental and social projects under its Sustainability Bond Framework. The issuance was strongly supported by investors and aligned with international standards, including the Sustainability Bond Guidelines, Green Bond Principles, and Social Bond Principles issued by ICMA.

ESG Repo

In 2022, Bank Mandiri executed Indonesia's first ESG Repo transaction, also among the earliest in Southeast Asia. The proceeds were directed to finance or refinance assets linked to environmental, social, and governance aspects. This marked an important milestone in advancing sustainability-oriented financial innovation within the national banking sector.

Involvement in Green Bonds

Throughout 2024, Mandiri Group, through Mandiri Sekuritas, actively supported clients as a trusted advisor in structuring green and sustainability bonds. Advisory assistance included identifying eligible sustainable projects, ensuring alignment with international standards such as the ICMA Green Bond Principles and LMA Green Loan Principles, and guiding issuers on transparent reporting practices. During the same year, Mandiri Sekuritas also served as Joint Lead Underwriter for several sustainability-themed bond issuances, including Social Bonds by PT Pegadaian and PT Sarana Multigriya Finansial (Persero), as well as Green Bonds by PT Oki Pulp & Paper. All issuances underwent independent verification, supported by advisory services across multiple sectors including financial services, property, agriculture, energy, and pulp & paper.

Green Bonds Phase II

In 2025, Bank Mandiri issued the Sustainable Green Bond I Phase II with issuance value of Rp5 trillion and a idAAA rating from PEFINDO. The issuance received strong investor interest, reflected in an oversubscription of 2.55 times the offered amount. These efforts aim to reduce economic disparity and foster more inclusive national growth. Bank Mandiri's financial inclusion targets include:

1. Low-income or irregular-income individuals.
2. Communities having difficulties in accessing banking services.
3. Persons with disabilities.
4. Workers without legal identification documents.
5. Areas with limited access to formal financial networks due to geographical constraints, dispersed populations, or low financial literacy.
6. Marginalized and/or vulnerable groups, such as women and children.
7. Micro-entrepreneurs having difficulties in accessing capital or banking services.

To expand banking access and help reduce social inequality, Bank Mandiri actively participates in the Financial Inclusion program by providing banking services for micro entrepreneurs and MSME business owners.

MSME Loan Access

MSMEs play a vital role in Indonesia's economy, contributing significantly to employment and overall economic activity. As a key driver of the national economy, the government continues to encourage MSMEs to innovate and move up the value chain to strengthen their contribution to economic growth.

Bank Mandiri supports MSME development by providing wider access to financing, recognizing that MSME portfolio growth generates positive social impacts such as improved livelihoods, job creation, and poverty reduction. By the end of 2025, Bank Mandiri recorded 1.27 million MSME borrowers with total loans amounting to Rp140.1 trillion, representing a 4.5% increase from the previous year. The MSME non-performing loan (NPL) ratio remained well-managed at 1.46%, with MSME financing accounting for 9.4% of the Bank's total loan portfolio.

To deepen its market reach, Bank Mandiri offers special financing schemes for MSMEs connected to its wholesale clients or within financing ecosystems. These ecosystems are centered around large corporations, multinationals, and state-owned enterprises (SOEs). Through this initiative, MSMEs gain access to more competitive interest rates compared to the regular Micro Business Loan (KUM) program. MSME financing is provided through Working Capital Loans and Investment Loans, along with KUM and participation in the government's People's Business Credit (KUR) program under the micro banking segment.

Bank Mandiri strengthened its commitment to expanding financial access for MSMEs through the development of integrated micro-financing ecosystems across the trade and agriculture sectors. Through this approach, Bank Mandiri extended financing more inclusively to micro-entrepreneurs and merchants that had previously been underserved by formal financial services, including through the placement of Point of Service (PoS) units at wholesale customers' Distribution Centers and the utilization of Digital Micro Loans (KUM Digital) to address accessibility challenges. This ecosystem-based approach also enables Bank Mandiri to enhance financing quality through stronger linkages among business actors in the value chain, while at the same time supporting higher MSME productivity and income generation.

Digital transformation presents both challenges and opportunities for MSMEs. Based on Bank Indonesia data, digital payment transactions in 2025 reached 14.26 billion transactions, growing by 39.21% year-on-year. Meanwhile, QRIS transactions continued to record very strong growth, increasing by 140%, with the number of users reaching 59.53 million and merchants totaling 42.75 million.

To support MSME digitalization, Bank Mandiri launched the Livin' Merchant by Mandiri app to expand financial access for micro-productive businesses. This point of sale (POS) application digitizes payment transactions, enabling merchants to receive QRIS payments from multiple banks and e-wallets. The app is free of charge and allows MSME users to withdraw funds up to three times per day.

Micro Financing Access

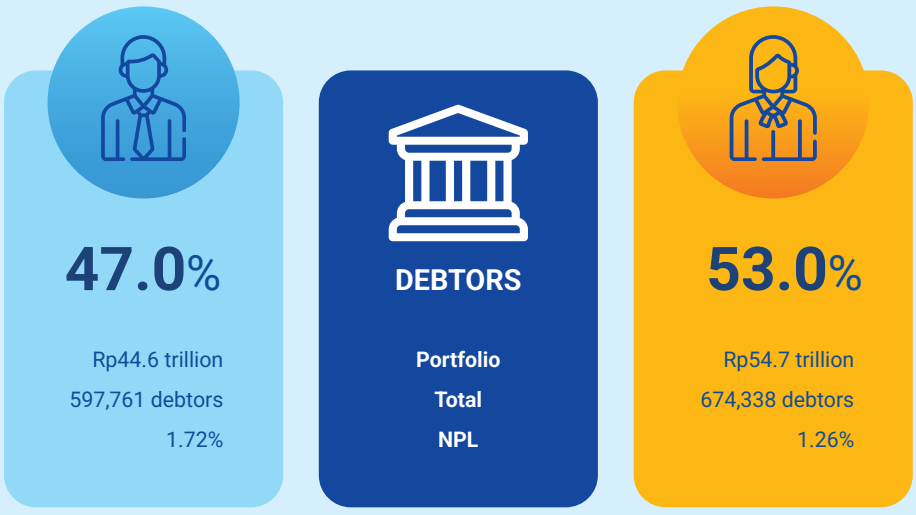
To promote economic growth and job creation, Bank Mandiri actively enhances MSME competitiveness through Micro Credit financing. Loan distribution is carried out using an integrated close loop upstream–downstream approach based on regional strategies, optimizing the value chain ecosystem of the Bank's wholesale customers.

People's Business Loan (KUR)

People's Business Credit (KUR) program targets productive and eligible businesses that lack sufficient collateral. The program aims to expand access to financing and enhance business capacity and competitiveness.

Leveraging its strength as a wholesale bank, Bank Mandiri applies an ecosystem-based KUR distribution strategy. Through this approach, the Bank partners with its wholesale clients, who recommend their business partners or managed entities as eligible KUR recipients.

There are 3 (three) types of KUR offered by Bank Mandiri:



- Retail KUR, for loan ceilings above Rp25 million up to a maximum of Rp200 million per borrower, with a maximum tenure of 3 years for working capital loans and 5 years for investment loans.
- Micro KUR, for loan ceilings up to Rp25 million per borrower, with a maximum tenure of 2 years.
- KUR for Migrant Workers (KUR TKI), for loan ceilings up to Rp25 million per borrower, with a tenure aligned to the employment contract or a maximum of 12 months.

From the start of the program in 2008 up to 2025, the Bank has disbursed KUR to 963,340 million borrowers, with a total financing value of Rp68.5 trillion.

Micro Business Loan (KUM)

As part of its support for productive business growth, the Micro Business Loan (KUM) is designed for micro entrepreneurs to finance investment or working capital needs. The product offers competitive interest rates, fixed monthly installments, and a simple, fast approval process.

KUM distribution reflects Bank Mandiri's commitment to helping MSMEs expand operations, increase productivity, and enhance competitiveness. By 2025, Bank Mandiri had disbursed KUM totaling Rp30.8 billion to 308,759 active borrowers.

Financing for Women through MSME Loan

Women play a vital role in strengthening Indonesia's MSME ecosystem. Bank Mandiri remains committed to empowering female entrepreneurs by enhancing their business competitiveness and capacity to drive economic growth and job creation.

Over the past five years, Bank Mandiri has recorded 674,338 active female micro-entrepreneurs with total financing of Rp55.2 trillion through KUR and KUM products, representing 53.01% of the Bank's 1.2 million active micro-loan customers.

Female borrowers also demonstrated stronger credit performance, with a Non-Performing Loan (NPL) ratio of 1.26% as of December 2025, compared to male borrowers with an NPL ratio of 1.72%.

Mandiri Makmur Savings (SiMakmur)

To expand financial access, Bank Mandiri introduced SiMakmur, a rupiah savings account operated through Mandiri Agents, enabling customers to transact without visiting a branch. The account has no minimum balance, no monthly fees, and is guaranteed by the Deposit Insurance Corporation (LPS).

Bank Mandiri also strengthens financial inclusion for persons with disabilities through the Inclusive Economic Acceleration Program, which includes opening 10,000 new savings accounts across West Java, Central Java, and Yogyakarta. The Bank offers tailored savings products such as Tabungan Now, Tabungan Mitra Usaha, and Tabungan SimPel for customers with disabilities who do not yet possess a National Identity Number (NIK). Cadangan kerugian penurunan nilai atas kredit yang diberikan dan piutang/pembiayaan syariah

Penjelasan atas hal audit utama:

Seperti yang dijelaskan dalam Catatan 12 atas laporan keuangan konsolidasian terlampir, pada tanggal 31 Desember 2025, total kredit yang diberikan dan piutang/pembiayaan syariah Grup adalah Rp1.849.967.956 juta dengan cadangan kerugian penurunan nilai atau kerugian kredit ekspektasian ("KKE") atas kredit yang diberikan dan piutang/pembiayaan syariah adalah sebesar Rp48.033.747 juta dan ditetapkan berdasarkan Pernyataan Standar Akuntansi Keuangan (PSAK) yang berlaku.

Untuk menentukan penyisihan kerugian penurunan nilai, Grup mengadopsi model kompleks yang menggunakan sejumlah parameter yang bergantung pada data input internal dan eksternal, melibatkan penilaian dan asumsi manajemen yang subjektif dengan tingkat ketidakpastian yang tinggi.

Kredit yang diberikan

Penerapan model KKE oleh Grup dalam menghitung penyisihan kerugian kredit dari kredit yang diberikan adalah signifikan bagi audit kami karena melibatkan pelaksanaan pertimbangan manajemen yang signifikan. Area pertimbangan yang utama termasuk: menentukan segmentasi kredit berdasarkan risiko kredit, menentukan model untuk perhitungan KKE, menentukan definisi gagal bayar, identifikasi eksposur kredit yang mengalami pemburukan kualitas kredit secara signifikan dan menentukan asumsi signifikan yang digunakan pada model KKE, termasuk faktor ekonomi makro berorientasi masa depan.

Allowance for impairment losses on loans and sharia receivables/financing

Description of key audit matter:

As described in Note 12 to the accompanying consolidated financial statements, as of 31 December 2025, the Group's loans and sharia financing/receivables was Rp1,849,967,956 million and the allowance for impairment losses or expected credit losses ("ECL") on loans and sharia financing/receivables was Rp48,033,747 million and was determined based on the applicable Statement of Financial Accounting Standards (SFAS).

To determine the allowance for impairment losses, the Group adopted a complex model that used a number of parameters relied on internal and external data inputs and involved subjective management judgment and assumptions subject to high degree of uncertainty.

Loans

The Group's application of the ECL in calculating the allowance for credit losses of loans to customers is significant to our audit as it involves the exercise of significant management judgment. Key areas of judgment include: determining credit segmentation based on credit risk, determining the model to calculate ECL, defining default, identification of credit exposures with significant deterioration in credit quality and determining significant assumptions used in the ECL model, including forward-looking macroeconomic factors.

Kami menguji pengendalian umum teknologi informasi (TI) atas sistem perhitungan penyisihan kerugian penurunan nilai serta pengendalian aplikasi TI atas kelengkapan data.

Kami juga menguji konsistensi antara pengalaman historis dan kondisi sekarang dengan kerugian terkini pada portofolio serta menilai kewajaran penyesuaian asumsi masa depan, analisis faktor ekonomi makro, dan beberapa skenario probabilitas tertimbang untuk kredit yang diberikan.

Untuk penyisihan penurunan nilai yang ditentukan secara individual, kami menguji sampel kredit yang diberikan untuk mengevaluasi apakah identifikasi dilakukan secara tepat waktu terhadap eksposur dengan penurunan kualitas kredit yang signifikan atau yang telah mengalami penurunan nilai. Untuk kredit yang diberikan yang diidentifikasi mengalami penurunan nilai, kami menilai asumsi utama atas arus kas masa depan yang akan diterima yang berasal dari kegiatan operasi, termasuk nilai jaminan yang dapat direalisasikan berdasarkan informasi pasar yang tersedia atau penilaian yang dilakukan oleh pakar manajemen atau manajemen sendiri.

We tested the information technology (IT) general controls over the allowance for impairment losses calculation system as well as the IT application controls over the completeness of the data.

We also tested the classification into the three-stage credit quality of loan portfolios in accordance with staging criteria established by the management regarding loans. We evaluated consistency of historical experience and the current circumstances with recent losses in the portfolios and assessed the reasonableness of forward-looking adjustments, macroeconomic factor analysis and probability-weighted multiple scenarios for loans.

With respect to individually assessed allowance for impairment losses, we tested a sample of loans to evaluate whether the timely identification was made for exposures with significant deterioration in credit quality or exposures which have been impaired. For loans identified to be impaired, we assessed key assumptions on the expected future cash flows from operating activities, including the realizable value of realizable collateral based on available market information or valuation prepared by the management's expert or the management itself.

Valuasi estimasi terbaik liabilitas kontrak asuransi dan marjin jasa kontraktual

Penjelasan atas hal audit utama:

Seperti yang dijelaskan dalam Catatan 27, liabilitas kontrak asuransi, atas laporan keuangan konsolidasian, nilai liabilitas kontrak asuransi, yang terutama terdiri dari liabilitas estimasi terbaik dan marjin jasa kontraktual masing-masing sebesar Rp32.164.590 juta dan Rp3.295.245 juta pada tanggal 31 Desember 2025.

Liabilitas estimasi terbaik (LET)

Kewajiban untuk menentukan penyelesaian klaim masa depan melibatkan model dalam menentukan penyelesaian arus kas yang kompleks dan sensitif terhadap asumsi ekonomi dan non-ekonomi yang ditetapkan oleh manajemen. Diperlukan pertimbangan dalam menetapkan asumsi ekonomi, khususnya tingkat diskonto (termasuk penyesuaian premi ilikuiditas) dan asumsi imbal hasil investasi dan dalam menentukan asumsi non-ekonomi sehubungan dengan mortalitas, morbiditas (termasuk biaya klaim medis), persistensi, dan beban (termasuk atribusi PSAK 117).

Terdapat risiko bahwa asumsi tidak mencerminkan lingkungan ekonomi dan demografi serta pengalaman operasional Grup. Dikarenakan adanya unsur pertimbangan dalam penetapan asumsi non-ekonomi dan sensitivitas atas saldo kontrak asuransi terhadap perubahan kecil dalam asumsi, maka terdapat risiko inheren atas estimasi oleh manajemen di area ini.

Valuation of the best estimate insurance contract liabilities and contractual service margin

Description of the key audit matter:

As described in Note 27, insurance contract liabilites, to the consolidated financial statements, the insurance contract liabilities mainly consist of the best estimate liabilities and contractual service margin of Rp32,164,590 million and Rp3,295,245 million, respectively, as of 31 December 2025.

Best estimate liabilities (BEL)

The determination of the BEL is calculated using complex fulfilment cashflow models and is sensitive to economic and non-economic assumptions set by management. Judgment is involved in setting economic assumptions, particularly discount rates (including the illiquidity premium adjustment) and investment return assumptions and in determining non-economic assumptions with respect to mortality, morbidity (including medical claims costs), persistency, and expenses (including SFAS 117 attribution).

There is a risk that assumptions do not reflect the economic environment and the Group's demographic and operating experience. Due to the element of judgment in setting non-economic assumptions and the sensitivity of the insurance contract balances to small changes in assumptions, there is an inherent risk of management's estimation in this area.

Liabilitas estimasi terbaik (LET) (lanjutan)

Kami menganggap integritas dan kesesuaian atas model dalam menentukan penyelesaian arus kas yang digunakan dalam saldo LET sangat penting dalam penilaian saldo kontrak asuransi. Kami juga mempertimbangkan risiko-risiko utama terkait kesesuaian pengaturan asumsi ekonomi dan non ekonomi, model yang diterapkan pada model penyelesaian arus kas, kelengkapan dan keakuratan data pemegang polis sebagai signifikan.

Marjin jasa kontrak (MJK)

Amortisasi dari MJK diukur dari servis yang diberikan, sesuai dengan unit jasa pertanggungan, dan sesuai dengan saldo awal MJK yang disesuaikan dengan mutasi selama periode, termasuk penambahan terhadap MJK selama periode dari bisnis baru, akresi bunga untuk kontrak asuransi yang diukur menggunakan Model Pengukuran Umum (MPU), perubahan nilai wajar dari aset yang mendasari untuk kontrak yang diukur dengan Pendekatan Biaya Variabel (PBV) dan perubahan dalam arus kas pemenuhan yang terjadi dari perubahan asumsi non-ekonomi, dan untuk PBV, perubahan asumsi ekonomi, yang terkait dengan jasa masa depan.

Perhitungan MJK adalah komplek dan melibatkan asumsi yang mengandung subjektivitas dalam menentukan unit jasa pertanggungan dan pergerakan dalam MJK.

Description of the key audit matter: (continued)

Best estimate liabilities (BEL) (continued)

We consider the integrity and appropriateness of fulfilment cashflow models used to determine BEL to be critical to the valuation of insurance contract balances. We also consider the key risks that relate to appropriateness of economic and non-economic assumption settings, model applied to the fulfillment cashflow models, completeness and accuracy of policyholder data as significant.

Contractual service margin (CSM)

The release of CSM is measured based on the level of service provided, as measured by coverage units, and is based on the opening CSM adjusted for movements in the period, including additions to the CSM during the period in respect of new business, interest accretion for contracts measured using General Measurement Model (GMM), the change in fair value of underlying items for contracts measured using Variable Fee Approach (VFA) and changes in fulfilment cashflows arising from changes in non-economic assumptions, and for VFA, changes in economic assumptions, that relate to future service.

The calculations of CSM are complex and involved subjectivity of assumptions in determining coverage units and movements in the CSM.

We gained an understanding of management's valuation of the best estimate insurance contract liabilities. We evaluated the valuation of the best estimate insurance contract liabilities, by involving auditor's expert. We obtained an understanding over management's process for setting economic and non-economic assumptions. For economic assumptions, we tested discount rates (along with the illiquidity premium assumptions) and investment return assumptions for a sample of currencies by reference to yield curves and compared the information used to the prevailing SFAS. For non-economic assumptions, we compared the key assumptions other than expense assumptions set by management with the results of management's experience, and regulatory developments around product featured and compared the expense assumptions to the historical and current expenses levels and policy relating to the attribution of expenses to insurance contracts.

We tested that the assumptions used in the models were consistent with approved basis. We obtained an understanding of management's processes over the appropriateness of model changes, completeness and accuracy of policy data.

Marjin jasa kontrak (MJK)

Kami memeroleh pemahaman atas proses manajemen dalam penentuan unit jasa pertanggungan dan penyusunan model perhitungan MJK. Kami menguji akurasi perhitungan MJK, termasuk penentuan dari unit jasa pertanggungan dan amortisasi MJK, melalui perhitungan kembali atas sampel dari Kelompok Kontrak Asuransi (KKA), dan membandingkan dampak perubahan asumsi dalam pergerakan MJK dengan perubahan perhitungan LET, termasuk mempertimbangkan apakah perubahan tersebut terkait jasa masa lalu atau masa depan.

For a sample of new models and changes to existing models, we compared management's model validation results with the terms and conditions of the related insurance contracts and the valuation policy. For these selected models, we performed an independent recalculation of the insurance contract liabilities for a sample of insurance contracts and compared the results to the output of the fulfilment cashflow models used by management, and tested reconciliation of model point files to the policy administration system and output of the fulfilment cashflow models.

Contractual service margin (CSM)

We obtained understanding of management's processes of determination of coverage units and development of CSM calculation model. We tested the accuracy of the CSM calculation, including the determination of coverage units and release of CSM, through reperformance of the calculation for a sample of Insurance Contract Group (ICG), and compared the impact of assumption changes in the CSM movement to related changes in the BEL calculation, including considering whether they related to past or future service.

Tanggung jawab auditor terhadap audit atas laporan keuangan konsolidasian

Tujuan kami adalah untuk memeroleh keyakinan memadai tentang apakah laporan keuangan konsolidasian secara keseluruhan bebas dari kesalahan penyajian material, baik yang disebabkan oleh kecurangan maupun kesalahan, dan untuk menerbitkan laporan auditor independen yang mencakup opini kami. Keyakinan memadai merupakan suatu tingkat keyakinan tinggi, namun bukan merupakan suatu jaminan bahwa audit yang dilaksanakan berdasarkan Standar Audit yang ditetapkan oleh IAPI akan selalu mendeteksi kesalahan penyajian material ketika hal tersebut ada. Kesalahan penyajian dapat disebabkan oleh kecurangan maupun kesalahan dan dianggap material jika, baik secara individual maupun secara agregat, dapat diekspektasikan secara wajar akan memengaruhi keputusan ekonomi yang diambil oleh pengguna berdasarkan laporan keuangan konsolidasian tersebut.

Sebagai bagian dari suatu audit berdasarkan Standar Audit yang ditetapkan oleh IAPI, kami menerapkan pertimbangan profesional dan mempertahankan skeptisisme profesional selama audit. Kami juga:

- Mengidentifikasi dan menilai risiko kesalahan penyajian material dalam laporan keuangan konsolidasian, baik yang disebabkan oleh kecurangan maupun kesalahan, mendesain dan melaksanakan prosedur audit yang responsif terhadap risiko tersebut, serta memeroleh bukti audit yang cukup dan tepat untuk menyediakan basis bagi opini kami. Risiko tidak terdeteksinya kesalahan penyajian material yang disebabkan oleh kecurangan lebih tinggi dari yang disebabkan oleh kesalahan, karena kecurangan dapat melibatkan kolusi, pemalsuan, penghilangan secara sengaja, pernyataan salah, atau pengabaian atas pengendalian internal.

Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements taken as a whole are free from material misstatement, whether due to fraud or error, and to issue an independent auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Standards on Auditing established by the IICPA will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with Standards on Auditing established by the IICPA, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to such risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or override of internal control.

- Memeroleh suatu pemahaman tentang pengendalian internal yang relevan dengan audit untuk mendesain prosedur audit yang tepat sesuai dengan kondisinya, tetapi bukan untuk tujuan menyatakan opini atas keefektivitasan pengendalian internal Grup.

- Mengevaluasi ketepatan kebijakan akuntansi yang digunakan serta kewajaran estimasi akuntansi dan pengungkapan terkait yang dibuat oleh manajemen.

- Menyimpulkan ketepatan penggunaan basis akuntansi kelangsungan usaha oleh manajemen dan, berdasarkan bukti audit yang diperoleh, apakah terdapat suatu ketidakpastian material yang terkait dengan peristiwa atau kondisi yang dapat menyebabkan keraguan signifikan atas kemampuan Grup untuk mempertahankan kelangsungan usahanya. Ketika kami menyimpulkan bahwa terdapat suatu ketidakpastian material, kami diharuskan untuk menarik perhatian dalam laporan auditor independen kami ke pengungkapan terkait dalam laporan keuangan atau, jika pengungkapan tersebut tidak memadai, memodifikasi opini kami. Kesimpulan kami didasarkan pada bukti audit yang diperoleh hingga tanggal laporan auditor independen kami. As part of an audit in accordance with Standards on Auditing established by the IICPA, we exercise professional judgment and maintain professional skepticism throughout the audit. We also: (continued)

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our independent auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusion is based on the audit evidence obtained up to the date of our independent auditor's report. However, future events or conditions may cause the Group to cease to continue as going concern.

b. Penggabungan usaha

Pada akhir bulan Februari 1998, Pemerintah Republik Indonesia (selanjutnya disebut "Pemerintah") mengumumkan rencana untuk melakukan restrukturisasi atas Bank Peserta Penggabungan.

Sehubungan dengan rencana restrukturisasi tersebut, Pemerintah mendirikan Bank Mandiri pada bulan Oktober 1998 dengan melakukan penyetoran tunai dan pengalihan saham Pemerintah pada Bank Peserta Penggabungan (Catatan 40a dan 40b). Selisih antara harga transfer dan nilai buku saham pada saat restrukturisasi tidak dihitung karena dinilai tidak praktis. Seluruh kerugian yang timbul selama periode restrukturisasi diakui dalam Program Rekapitalisasi.

Rencana restrukturisasi tersebut dirancang untuk menggabungkan usaha Bank Peserta Penggabungan ke dalam Bank Mandiri pada bulan Juli 1999 dan rekapitalisasi Bank Mandiri. Restrukturisasi Bank Peserta Penggabungan ke dalam Bank Mandiri juga mencakup:

i. Restrukturisasi kredit yang diberikan;
ii. Restrukturisasi aset non-kredit yang diberikan;
iii. Rasionalisasi kantor cabang di dalam dan luar negeri;
iv. Rasionalisasi sumber daya manusia.

Berdasarkan Akta Notaris Sutjipto, S.H., No. 100 tanggal 24 Juli 1999, Bank Peserta Penggabungan secara hukum melakukan penggabungan usaha ke dalam Bank Mandiri. Akta Penggabungan Usaha tersebut disahkan oleh Menteri Kehakiman Republik Indonesia dengan Surat Keputusan No. C-13.781.HT.01.04.TH.99 tanggal 29 Juli 1999 dan disetujui oleh Gubernur Bank Indonesia dengan Surat Keputusan No. 1/9/KEP.GBI/1999 tanggal 29 Juli 1999. b. Merger

At the end of February 1998, the Government of the Republic of Indonesia (hereinafter referred to as "Government") announced its plan to restructure the Merged Banks.

In connection with the restructurisation plan, the Government established Bank Mandiri in October 1998 through the payment of cash and the transfer the Government's shares of the Merged Banks (Note 40a and 40b). The difference between the transfer price and the book value of the shares at the time of the restructurisation was not calculated as it was considered not practicable to do so. All losses incurred during the year of restructuring were recognised in the Recapitalisation Program.

The restructurisation plan was designed to merge the Merged Banks' business into Bank Mandiri on July 1999 and the recapitalisation of Bank Mandiri. The restructurisation of the Merged Banks into Bank Mandiri also covered the following:

i. Restructurisation of loans;
ii. Restructurisation of non-loan assets;
iii. Rationalisation of domestic and overseas offices;
iv. Rationalisation of human resources.

Based on the Notarial Deed of Sutjipto, S.H., No. 100 dated 24 July 1999, the Merged Banks were legally merged into Bank Mandiri. The Merger Deed was legalised by the Ministry of Justice of the Republic of Indonesia in its Decision Letter No. C-13.781.HT.01.04.TH.99 dated 29 July 1999 and approved by the Governor of Bank Indonesia in its Decision Letter No. 1/9/KEP.GBI/1999 dated 29 July 1999. c. Instrumen keuangan (lanjutan)

i. Aset keuangan (lanjutan)

Grup menggunakan 2 (dua) dasar untuk mengklasifikasikan aset keuangan yaitu model bisnis Grup dalam mengelola aset keuangan dan karakteristik arus kas kontraktual pembayaran pokok dan bunga (*Solely Payment of Principal and Interest* ("SPPI")) dari aset keuangan.

Pengujian SPPI

Sebagai langkah pertama dari proses klasifikasi, Grup menilai persyaratan kontraktual keuangan untuk mengidentifikasi apakah mereka memenuhi pengujian SPPI.

Pokok pinjaman untuk tujuan pengujian ini didefinisikan sebagai nilai wajar dari aset keuangan pada pengakuan awal dan dapat berubah selama umur aset keuangan (misalnya, jika ada pembayaran pokok atau amortisasi premi/diskon).

Elemen bunga yang paling signifikan dalam perjanjian kredit biasanya adalah pertimbangan atas nilai waktu dari uang dan risiko kredit. Untuk membuat penilaian SPPI, Grup menerapkan pertimbangan dan memperhatikan faktor-faktor yang relevan seperti mata uang dimana aset keuangan didenominasikan dan periode pada saat suku bunga ditetapkan.

Penilaian model bisnis

Grup menentukan model bisnisnya berdasarkan tingkat yang paling mencerminkan bagaimana Grup mengelola kelompok atas aset keuangannya untuk mencapai tujuan bisnisnya.

Model bisnis Grup tidak dinilai berdasarkan masing-masing instrumennya, tetapi pada tingkat portofolio secara agregat yang lebih tinggi dan didasarkan pada faktor-faktor yang dapat diamati seperti:

- Bagaimana kinerja model bisnis dan aset keuangan yang dimiliki dalam model bisnis tersebut dievaluasi dan dilaporkan kepada personel manajemen kunci;

c. Financial instruments *(continued)*

i. Financial assets *(continued)*

The Group used 2 (two) methods to classify its financial assets, which based on the Group's business model in managing the financial asset, and the contractual cash flow of the financial assets Solely Payment of Principal and interest ("SPPI").

SPPI test

As a first step of its classification process, the Group assesses the contractual terms of financial to identify whether they meet the SPPI test.

Principal, for the purpose of this test is defined as the fair value of the financial asset at initial recognition and may change over the life of the financial asset (for example, if there are repayments of principal or amortisation of the premium/discount).

The most significant element of interest within a credit contract are typically the consideration for the time value of money and credit risk. To perform the SPPI assessment, the Group applies judgement and considers relevant factors such as the currency in which the financial asset is denominated, and the period for which the interest rate is set.

Business model assessment

The Group determines its business model at the level that best reflects how the group manages a group of financial assets to achieve its business objective.

The Group's business model is not assessed by each instrument, but at a higher level of aggregated portfolios and is based on observable factors such as:

- *How the performance of the business model and the financial assets held within that business model are evaluated and reported to the entity's key management personnel;*

c. Instrumen keuangan (lanjutan)

i. Aset keuangan (lanjutan)

Penilaian model bisnis (lanjutan)

Model bisnis Grup tidak dinilai berdasarkan masing-masing instrumennya, tetapi pada tingkat portofolio secara agregat yang lebih tinggi dan didasarkan pada faktor-faktor yang dapat diamati seperti: (lanjutan)

- Risiko yang mempengaruhi kinerja model bisnis (dan aset keuangan yang dimiliki dalam model bisnis tersebut) dan khususnya, bagaimana cara risiko tersebut dikelola;
- Bagaimana manajer bisnis dikompensasi (misalnya, apakah kompensasi didasarkan pada nilai wajar dari aset yang dikelola atau pada arus kas kontraktual yang tertagih);
- Frekuensi, nilai dan waktu penjualan yang diharapkan, juga merupakan aspek penting dari penilaian Grup.

Penilaian model bisnis didasarkan pada skenario yang diharapkan secara wajar tanpa mempertimbangkan skenario "*worst case*" atau "*stress case*".

Jika arus kas setelah pengakuan awal direalisasikan dengan cara yang berbeda dari yang awal diharapkan, Grup tidak mengubah klasifikasi aset keuangan dimiliki yang tersisa dalam model bisnis tersebut, tetapi memasukkan informasi tersebut dalam melakukan penilaian atas aset keuangan yang baru atau yang baru dibeli selanjutnya.

(a) Aset keuangan yang diukur pada nilai wajar melalui laba rugi

Aset keuangan diukur pada nilai wajar melalui laba rugi kecuali tes model bisnis dan tes arus kas kontraktual menunjukkan bahwa aset keuangan masuk ke dalam klasifikasian diukur pada biaya perolehan diamortisasi atau nilai wajar melalui penghasilan komprehensif lain.

Business model assessment (continued)

The Group's business model is not assessed by each instrument, but at a higher level of aggregated portfolios and is based on observable factors such as: (continued)

- *The risks that affect the performance of the business model (and the financial assets held within that business model) and, in particular the way those risks are managed;*
- *How business managers are compensated (for example, whether the compensation is based on the fair value of the assets managed or on the contractual cash flows collected);*
- *The expected frequency, value, and timing of sales are also important aspects of the Group's assessment.*

The business model assessment is based on reasonably expected scenarios without taking "worst case" or "stress case" scenarios into account.

If cash flows after initial recognition are realised in a way that is different from the Group's initial expectations, the Group does not change the classification of the remaining financial assets held in that business model, but incorporates such information when assessing newly originated or newly purchased financial assets going forward.

(a) Financial assets measured at fair value through profit or loss

Financial assets are measured at fair value through profit or loss unless the business model test and the contractual cash flow test show that financial assets entering into classifications are measured at amortised cost or fair value through other comprehensive income.

This classification is intended for held for trading financial instruments or at the time of initial recognition has been determined by the Group to be measured at fair value through profit or loss.

iii. Penghentian pengakuan

Penghentian Pengakuan Aset Keuangan

Penghentian pengakuan aset keuangan dilakukan ketika hak kontraktual atas arus kas yang berasal dari aset keuangan tersebut berakhir, atau ketika aset keuangan tersebut telah ditransfer dan secara substansial seluruh risiko dan manfaat atas kepemilikan aset tersebut telah ditransfer (jika, secara substansial seluruh risiko dan manfaat tidak ditransfer, maka Grup melakukan evaluasi untuk memastikan keterlibatan berkelanjutan atas kendali yang masih dimiliki tidak mencegah penghentian pengakuan).

Agunan yang diserahkan oleh Grup di dalam perjanjian efek-efek yang dijual dengan janji untuk dibeli kembali dan transaksi *securities lending* dan *borrowing* tidak dihentikan pengakuannya karena Grup secara substansial masih memiliki seluruh risiko dan manfaat atas agunan tersebut, berdasarkan kesepakatan bahwa harga pembelian kembali telah ditentukan di awal, sehingga kriteria penghentian pengakuan tidak terpenuhi.

Aset keuangan yang dialihkan kepada pihak ketiga tetapi tidak memenuhi syarat penghentian pengakuan disajikan di dalam laporan posisi keuangan konsolidasian sebagai "Aset lain-lain - Tagihan atas efek-efek dan obligasi pemerintah yang diagunkan", dimana pihak penerima memiliki hak untuk menjual atau mentransfer kembali.

Penghentian Pengakuan Liabilitas Keuangan

Penghentian pengakuan liabilitas keuangan dilakukan jika liabilitas keuangan tersebut telah berakhir karena kewajiban yang ditetapkan dalam kontrak telah dilepaskan, dibatalkan atau kedaluwarsa atau apabila terdapat perubahan yang substansial dalam persyaratan suatu liabilitas keuangan, maka kontrak liabilitas keuangan sebelum perubahan akan dihapus dan Grup akan mengakui liabilitas keuangan baru.

iii. Derecognition

Derecognition of Financial Assets

Financial assets are derecognised when the contractual rights to receive the cash flows from these assets have expired or matured or the assets have been transferred and substantially all the risks and rewards of ownership of the assets are also transferred (if substantially all the risks and rewards have not been transferred, the Group evaluates to ensure that continuing involvement on the basis of any retained powers of control does not prevent derecognition).

Collateral that is provided by the Group under the agreement of securities sold under agreements to repurchase and securities lending and borrowing transactions are not derecognised because the Group substantially has all the risks and benefits of the collateral, based on the requirement that the repurchase price that has been determined at the beginning, so that the criteria for derecognition are not met.

Financial assets that are transferred to third parties but do not qualify for derecognition criteria are presented in the consolidated statements of financial position as "Other assets - Receivables from securities and government bonds pledged as collateral", which the recipient has the right to sell or transfer back.

Derecognition of Financial Liabilities

Financial liabilities are derecognised when the financial liabilities have expired because the obligations specified in the contract have been released, canceled or expired or if there is a substantial change in the terms of a financial liability, the financial liability contract before the change will be written off and the Group will recognize the new financial liability.

Hapus buku

Dalam hal penghapusbukuan aset keuangan merupakan kelanjutan dari tindakan penyelesaian aset keuangan dengan cara pengambilalihan agunan, maka jumlah yang dihapusbuku adalah sebesar selisih kurang antara nilai wajar agunan yang diambil alih setelah memperhitungkan taksiran biaya penjualan dengan nilai tercatat aset keuangan.

Aset keuangan dapat dihapusbuku apabila cadangan kerugian penurunan nilai telah dibentuk 100%.

Penghapusbukuan dilakukan secara keseluruhan terhadap nilai tercatat aset keuangan dengan mendebit cadangan kerugian penurunan nilai.

iv. Modifikasi atas arus kas aset keuangan

Penilaian apakah modifikasi atau restrukturisasi atas suatu aset keuangan menghasilkan atau tidak menghasilkan penghentian pengakuan, dilakukan oleh unit bisnis yang berwenang melakukan restrukturisasi aset keuangan tersebut.

Grup mengakui aset keuangan dimodifikasi atau direstrukturisasi secara substansial dan menghasilkan penghentian pengakuan ketika:

(a) aset keuangan (atau bagiannya) berakhir, yaitu jika debitur secara hukum dibebaskan dari tanggung jawab utama atas aset tersebut (atau bagiannya), baik melalui proses hukum maupun oleh kreditur pembuatan kontrak kredit baru (sebagai contoh, opsi *equity conversion*); atau

(b) terdapat konversi mata uang.

Financial assets can be written-off when the allowance for impairment losses have been 100% established.

Full write-off is done to the financial assets' carrying amount by debiting the allowance for impairment losses.

iv. Modification of financial assets cash flow

An assessment of whether a financial asset has been modified or restructured substantially or not substantially derecognised is carried out by a business unit whose authorised to modify or restructure financial assets.

(a) the financial asset (or portion thereof) expires, that is, if the debtor is legally released from primary responsibility for the asset (or any portion thereof), either by legal process or by the creditor entering into a new credit contract (for example, the equity conversion option); or

(b) there is a currency conversion.

iv. Modifikasi atas arus kas aset keuangan (lanjutan)

Grup menilai apakah modifikasi atau restrukturisasi atas suatu aset keuangan menghasilkan atau tidak menghasilkan penghentian pengakuan dengan cara berikut:

(a) Modifikasi aset keuangan yang menghasilkan penghentian pengakuan aset keuangan

1. Saat arus kas kontraktual atas aset keuangan direstrukturisasi atau dimodifikasi (antara lain ketika kredit direstrukturisasi) dimana restrukturisasi atau modifikasi tersebut menghasilkan penghentian pengakuan aset keuangan, Grup akan mencatat aset keuangan tersebut sebagai aset keuangan baru/modifikasian pada tanggal modifikasi/restrukturisasi.
2. Selisih nilai tercatat aset keuangan sebelum modifikasi/restrukturisasi dengan nilai wajar aset setelah modifikasi/restrukturisasi diakui di laba rugi.
3. iv. Modification of financial assets cash flow *(continued)*

The Group will measure the substantially and not substantially modified financial assets as follows:

2. The difference between the gross amount of the initial financial assets and the fair value of the modified or restructuring assets recorded as profit or loss.
3. When the contractual cashflow on a financial asset is restructured or modified (including when a credit is restructured) and the restructuring or modification results in derecognition of the financial asset, therefore the Group will record the financial asset as a new/modified financial asset on the modification/restructuring date.
4. The difference between the gross amount of the initial financial assets and the fair value of the modified or restructuring assets recorded as profit or loss.
5. Transaction income or costs incurred in connection with a modification event recognised as part of gain or loss on the modification.

iv. Modifikasi atas arus kas aset keuangan (lanjutan)

(b) Modifikasi aset keuangan yang tidak menghasilkan penghentian pengakuan aset keuangan

1. Saat Grup melakukan renegosiasi atau modifikasi arus kas kontraktual atas aset keuangan (antara lain ketika kredit direstrukturisasi) yang tidak memenuhi kriteria modifikasi aset keuangan yang substansial di atas, maka restrukturisasi atau modifikasi tersebut tidak menghasilkan penghentian pengakuan aset keuangan.
2. Jumlah tercatat bruto aset keuangan dihitung sebesar nilai kini *(net present value)* dari arus kas neto kontraktual yang telah dimodifikasi atau direstrukturisasi yang didiskontokan menggunakan suku bunga efektif awal.
3. Grup kemudian mengakui keuntungan atau kerugian dari modifikasi (yaitu sebesar perubahan jumlah tercatat bruto aset keuangan) dalam laporan laba rugi.
4. Pendapatan atau biaya transaksi yang terjadi sehubungan dengan kejadian modifikasi diakui sebagai penyesuaian terhadap jumlah tercatat aset keuangan yang telah dimodifikasi dan diamortisasi selama sisa jangka waktu aset keuangan modifikasian tersebut dengan menggunakan suku bunga efektif awal.

iv. Modification of financial assets cash flow *(continued)*

The Group will measure the substantially and not substantially modified financial assets as follows: (continued)

7. Recognition of interest income on assets originating from Impaired financial assets is calculated based on an effective interest rate adjusted for credit risk (risk-adjusted effective interest rate) to discount the cash flows of modified financial assets.

(b) Non-substantial modification of financial assets

When the Group renegotiates or modifies contractual cash flows of financial assets (including when loans are restructured) that do not meet the criteria for substantial modification of financial assets above, the restructuring or modification does not result in derecognition of the financial assets.

2. The gross carrying amount of financial assets is computed at the net present value of modified or restructured contractual cash flows, discounted at the initial effective interest rate.

3. The Group then recognizes the gain or loss from the modification (i.e the change in the gross carrying amount of the financial asset) in the profit or loss.

4. Transaction income or costs incurred in connection with a modification event are recognised as an adjustment to the carrying amount of the modified financial asset and amortised over the remaining term of the modified financial asset using the initial effective interest rate.

c) The lender, for economic or legal reasons relating to the borrower's financial difficulty, granting to the borrower a concession that the lender would not otherwise consider if the borrower is not having that financial difficulty;

d) There is a probability that the borrower will enter bankruptcy or other financial reorganisation;

e) The disappearance of an active market for that financial asset because of financial difficulties; or

f) Purchase or issuance of financial asset at significant discount which reflects the credit loss that occurs.

The Group uses additional criteria to determine the quality of financial instrument assets in accordance with the Financial Services Authority Regulation (POJK) No. 40/POJK.03/2019 dated 19 December 2019 concerning Asset Quality Assessment for Commercial Banks.

Furthermore, the Group classifies financial assets based on the evaluation results, which reflect the level of credit risk of the financial assets.

a) Stage 1

At the evaluation date of impairment, credit risk on financial instruments does not increase significantly since initial recognition.

viii. Cadangan kerugian penurunan nilai aset keuangan (lanjutan)

Metode penurunan nilai

Grup melakukan evaluasi penurunan nilai dengan metode sebagai berikut:

a. Metode Individual

Kriteria individual

Grup mengevaluasi penurunan nilai secara individual apabila Grup memiliki informasi yang wajar dan terdukung untuk mengukur kerugian kredit ekspektasian sepanjang umurnya pada instrumen secara individual dan aset keuangan memiliki kriteria sebagai berikut:

a. Aset keuangan per debitur memiliki nilai *outstanding* kumulatif lebih dari Rp25.000 (dua puluh lima miliar Rupiah);
b. Kredit segmen *Corporate*, Kelembagaan, *Financial Institutions*, *Commercial*, dan SME *Banking*; dan
c. Aset keuangan termasuk dalam kategori *stage* 2 akibat dari restrukturisasi, *stage* 3, atau POCI.

Grup juga dapat menetapkan aset keuangan untuk dievaluasi secara individual meskipun aset keuangan dimaksud belum memiliki kriteria untuk dievaluasi secara individual.

Jika aset keuangan terdapat bukti objektif penurunan nilai dari aset keuangan yang dievaluasi secara individual namun tidak terdapat kerugian penurunan nilai, maka aset keuangan tersebut tetap dimasukkan ke dalam klasifikasi aset keuangan yang akan dievaluasi penurunan nilainya secara individual. Namun, Grup membentuk cadangan kerugian penurunan nilai atas aset keuangan tersebut berdasarkan *probability of default* yang dihasilkan dari evaluasi penurunan nilai kredit secara kolektif.

Impairment method

The Group evaluates the impairment using the following methods:

a. Individual Method

Individual criteria

The Group evaluates impairment individually when the Group has reasonable and supportable information to measure the lifetime expected credit losses on an individual instrument and the financial assets have the following criteria:

a. Financial assets per debtor with a cumulative outstanding amount of more than Rp25,000 (twenty five billion Rupiah);
b. Loans for the Corporate, Institutional, Financial Institutions, Commercial, and SME Banking segments; and
c. Financial assets fall into the stage 2 category as a result of a restructuring, stage 3, or POCI.

The Group may also designate financial assets to be evaluated individually even though the financial assets have not yet meet criteria for individual evaluation.

If a financial asset has objective evidence of impairment from a financial asset that is evaluated individually but there is no impairment loss, the financial asset is still classified as a financial asset that will be assessed for impairment individually. However, the Group establishes allowance for impairment losses on these financial assets based on the probability of default resulting from a collective evaluation of loans impairment.

Metode penurunan nilai (lanjutan)

Grup melakukan evaluasi penurunan nilai dengan metode sebagai berikut: (lanjutan)

a. Metode Individual (lanjutan)

Evaluasi Penurunan Nilai

Evaluasi penurunan nilai secara individual didasarkan pada konsep estimasi jumlah probabilitas tertimbang kerugian aset keuangan. Konsep tersebut menggunakan pembobotan masing-masing dari 3 (tiga) skenario yaitu skenario optimis, skenario normal, dan skenario pesimis.

1. Optimis

Skenario dengan asumsi terdapat kenaikan atau ekspansi dalam perekonomian yang berakibat pada menguatnya nilai variabel seperti pertumbuhan ekonomi meningkat atau apresiasi nilai tukar.

2. Normal

Skenario yang memiliki peluang terbesar untuk terjadi dibandingkan 2 (dua) skenario lainnya. Nilai variabel dalam skenario *baseline* adalah hasil proyeksi dengan asumsi pergerakan ekonomi tanpa adanya peristiwa luar biasa, guncangan atau gejolak ekonomi.

3. Pesimis

Skenario dengan asumsi terdapat pelemahan atau kontraksi dalam perekonomian yang berakibat melemahnya nilai variabel seperti penurunan pertumbuhan ekonomi atau depresiasi nilai tukar.

Impairment method *(continued)*

The Group evaluates the impairment using the following methods: (continued)

a. Individual Method (continued)

Impairment Evaluation

Individual impairment evaluation is based on the concept of an estimated weighted probability of loss of financial assets. This concept uses the weighting of each of the 3 (three) scenarios, which are the optimistic scenario, the normal scenario, and the pessimistic scenario.

1. Optimistic

A scenario with the assumption that there is an increase or expansion in the economy which results in the strengthening of variable values such as increased economic growth or exchange rate appreciation.

2. Normal

The scenario that has the greatest chance of occurring compared to the other 2 (two) scenarios. The variable value in the baseline scenario is the projection result assuming economic movements without any extraordinary events, shocks or economic turmoil.

3. Pessimistic

Scenarios with the assumption that there is a weakening or contraction in the economy that results in weakening of variable values such as a decrease in economic growth or depreciation of the exchange rate.

Evaluasi Penurunan Nilai (lanjutan)

Setiap skenario menghasilkan nilai kini arus kas yang didiskontokan, dimana arus kas tersebut didasarkan pada seluruh informasi yang tersedia dengan *experienced credit judgement* serta mencerminkan seluruh informasi yang memperhatikan berbagai faktor seperti:

1. Kekuatan finansial dan kemampuan debitur untuk membayar kembali kewajiban.
2. Jenis dan jumlah agunan.
3. Ketersediaan garansi.
4. Prospek usaha nasabah di masa datang.
5. Probabilitas penjualan agunan.
6. Kerugian historis.
7. Faktor makroekonomi yang relevan.

Selisih estimasi jumlah probabilitas tertimbang dengan jumlah *outstanding* aset keuangan mencerminkan jumlah kerugian penurunan nilai individual.

Metode evaluasi penurunan nilai secara individual didasarkan pada 2 (dua) konsep, yaitu estimasi jumlah kerugian aset keuangan dan estimasi jumlah yang dapat diperoleh kembali.

Metode yang digunakan adalah *discounted cash flow* atau metode *fair value of collateral.* Bank menggunakan metode *fair value of collateral* sebagai arus kas masa datang apabila memenuhi salah satu kondisi berikut:

1. Kredit bersifat *collateral dependent*, yaitu jika pelunasan kredit hanya bersumber dari agunan;
2. Sulit untuk menentukan jumlah dan waktu penerimaan estimasi arus kas yang berasal dari pokok kredit dan/atau bunga dengan andal; dan/atau

Impairment Evaluation (continued)

Each scenario provides a discounted present value of cash flows, where the cash flows are based on all available information with experienced credit judgment and reflect all information that takes into account various factors such as:

1. *Financial strength and the debtor's repayment capacity.*
2. *Type and amount of collateral.*
3. *Availability of warranty.*
4. *Customers' future business prospects.*
5. *Probability of collateral sale.*
6. *Historical losses.*
7. *Relevant macroeconomic factors.*

The difference between the weighted probability and the total outstanding of financial assets reflects the amount of the individual impairment loss.

The individual impairment evaluation method is based on 2 (two) concepts, which are the estimated amount of loss on financial assets and the estimated amount that can be recovered.

The method used are discounted cash flow or fair value of collateral method. The Bank uses the fair value of collateral method as future cash flows if it meets one of the following conditions:

1. *Loans is collateral dependent, if loans repayment source only from collateral;*
2. *It is difficult to reliably determine the amount and timing of receipt of the estimated cash flow from loan principal and/or interest; and/or*

b. Metode Kolektif (lanjutan)

Kriteria Kolektif (lanjutan)

Secara garis besar, seluruh portofolio kredit yang evaluasi penurunan nilainya tidak dihitung menggunakan metode individual, akan dievaluasi menggunakan metode kolektif.

Evaluasi Penurunan Nilai

Evaluasi penurunan nilai secara kolektif didasarkan pada konsep *Probability of Default* (PD), *Loss Given Default* (LGD) dan *Exposure at Default* (EAD) yang mempertimbangkan informasi masa lalu, terkini, dan masa mendatang.

a. *Probability of Default*

Bank menggunakan metode *Basel, Vasicek, Roll Rate Transition Matrix* maupun pendekatan lainnya dalam menentukan nilai PD dari setiap debitur.

Metode *Basel* dilakukan dengan menentukan hubungan antara PD suatu debitur dengan karakteristik internal dari debitur yang bersangkutan. Model Basel yang telah didapatkan digunakan sebagai dasar penentuan nilai PD dari setiap debitur.

Metode *Vasicek* adalah metode penentuan PD menggunakan formula korelasi aset yang telah ditentukan oleh *Basel Committee*.

b. Collective Method (continued)

Collective Criteria (continued)

In general, all loan portfolios for which impairment evaluation is not calculated using the individual method will be evaluated using the collective method.

Impairment Evaluation

The evaluation of collective impairment is based on the concepts of Probability of Default (PD), Loss Given Default (LGD), and Exposure at Default (EAD) which consider past, current, and future information.

a. Probability of Default

The Bank uses the Basel, Vasicek, Roll Rate Transition Matrix, and other approaches in determining the PD value of each debtor.

The Basel method is performed by determining the relationship between a debtor's PD with the internal characteristics of that debtor. The Basel model that has been obtained is used as the basis for determining the PD value of each debtor.

The Vasicek method is a method of determining PD using the asset correlation formula that has been determined by the Basel Committee.

Evaluasi Penurunan Nilai (lanjutan)

a. *Probability of Default (lanjutan)*

Metode *Roll Rate Transition Matrix* menggunakan *historical transition bucket* PD. *Bucket* PD yang digunakan dalam perhitungan *historical* adalah sebagai berikut:
1. *Bucket* 1: Lancar
2. *Bucket* 2: 1-30 *days past due* (dpd)
3. *Bucket* 3: 31-60 dpd
4. *Bucket* 4: 61-90 dpd
5. *Bucket* 5: > 90 dpd

PD *Forward-Looking Macro Adjustment* adalah metode yang digunakan untuk menentukan nilai PD *forward looking* dari pendekatan baik *Basel* maupun *Roll Rate* berdasarkan hubungan historis antara makro ekonomi dengan nilai PD Bank

b. *Loss Given Default*

Bank menggunakan metode *Basel* dan *Historical* dalam menentukan nilai LGD dari setiap debitur. LGD menggambarkan persentase nominal fasilitas yang tidak akan dapat dipulihkan oleh Bank terhadap debitur *default*. LGD biasa dihitung dengan formula 1-*Recovery Rate*. *Recovery rate* dihitung mempertimbangkan *Time Value of Money* dari pengembalian kewajiban yang telah default. Tingkat suku bunga yang digunakan untuk menghitung *Time Value of Money* dari *Recovery* adalah *Effective Interest Rate* (EIR).

a. Probability of Default (continued)

The Roll Rate Transition Matrix method uses the historical transition bucket PD. PD buckets used in historical calculations are as follows:

1. *Bucket 1: Current*
2. *Bucket 2: 1-30 days past due (dpd)*
3. *Bucket 3: 31-60 dpd*
4. *Bucket 4: 61-90 dpd*
5. *Bucket 5: > 90 dpd*

PD Forward-Looking Macro Adjustment is a method used to determine the forward looking PD value of both Basel and Roll Rate approaches based on the historical relationship between the macro economy and the PD value of the Bank.

b. Loss Given Default

The Bank uses Basel and Historical methods in determining the LGD value of each debtor. LGD describes the nominal percentage of the facility that the Bank will not be able to recover against the default debtor. Regular LGD is calculated with formula 1-Recovery Rate. The recovery rate is calculated by considering the Time Value of Money from the recovery of the default obligation. The interest rate used to calculate the Time Value of Money of Recovery is the Effective Interest Rate (EIR).

Metode *Historical* dilakukan dengan menghitung rata-rata nilai LGD dalam periode jangka panjang pada segmen yang dimaksud.

Forward-Looking Macro Adjustment pada LGD adalah metode yang digunakan untuk menentukan nilai LGD *forward looking* berdasarkan hubungan historis antara makroekonomi dengan nilai LGD Bank. Jika tidak didapatkan hubungan antara makroekonomi dengan nilai LGD Bank, maka Bank tidak dapat menggunakan *Forward-Looking* dalam penentuan nilai LGD.

c. *Exposure at Default*

Dalam menentukan nilai EAD dari setiap debitur, Bank menggunakan metode *Basel*, *Prepayment Rate* dan *Expected Lifetime*. EAD menggambarkan *exposure* yang akan ditanggung Bank jika terdapat debitur yang *default*.

Metode *Basel* dalam perhitungan EAD dilakukan dengan menentukan hubungan antara EAD suatu debitur dengan karakteristik internal dari debitur yang bersangkutan.

The Basel method is carried out by determining the relationship between a debtor's LGD and the internal characteristics of the debtor concerned. The Basel model that has been obtained is used as the basis for determining the LGD value of each debtor.

Historical method is done by calculating the average value of LGD in the long term observation period in the respective segment.

Forward-Looking Macro Adjustment in LGD is a method used to determine the forward looking LGD value based on the historical relationship between macroeconomics and the Bank's LGD value. If there is no relationship between macroeconomics and the Bank's LGD value, the Bank may not use Forward-Looking in determining the LGD value.

c. Exposure at Default

In determining the EAD value of each debtor, the Bank uses the Basel, Prepayment Rate, and Expected Lifetime method. EAD describes the exposure that will be borne by the Bank if there is a debtor become defaults.

The Basel method in calculating EAD is performed by determining the relationship between a debtor's EAD and the internal characteristics of the respective debtor.

d. *Expected Credit Loss*

Secara umum formula untuk menghitung ECL secara kolektif adalah pengkalian antara *Probability of Default*, *Loss Given Default*, dan *Exposure at Default*.

Dalam menghitung besarnya cadangan kerugian penurunan nilai kolektif, Bank menggunakan nilai saldo rekening kredit dari yang penurunan nilainya dievaluasi secara kolektif.

Metode perhitungan pada masing-masing *stage* adalah sebagai berikut:
1. *Stage* 1: 12-*months* ECL
2. *Stage* 2: *Lifetime* ECL

Probability weighted dalam perhitungan cadangan kerugian penurunan nilai telah ditentukan oleh Grup mencakup persentase skenario optimis, normal, dan pesimis.

Total rata-rata tertimbang atas estimasi arus kas dimaksud menjadi pengurang atas nilai tercatat kredit yang dimana selisihnya akan menjadi cadangan kerugian penurunan nilai kredit.

ECL-Lifetime is the calculation of the expected loss which is calculated for the remaining tenor of the facility.

Every year in calculating the ECL uses the discount factor based on formula that the Group has formulated.

The probability weighted in the calculation of impairment has been determined by the Group which includes the percentage of optimistic, normal, and pessimistic scenarios.

The total weighted of the estimated cash flow becomes a deduction from the carrying amount of the loans, where the difference will be the allowance for impairment on loans.

Kontrak jaminan keuangan dan komitmen

Kontrak jaminan keuangan adalah kontrak yang mengharuskan penerbit untuk melakukan pembayaran yang ditetapkan untuk mengganti uang pemegang kontrak atas kerugian yang terjadi karena debitur tertentu gagal untuk melakukan pembayaran pada saat jatuh tempo, sesuai dengan ketentuan dari instrumen utang.

Jaminan keuangan tersebut diberikan kepada bank-bank, lembaga keuangan dan badan-badan lainnya atas nama debitur untuk menjamin kredit dan fasilitas-fasilitas perbankan lainnya.

Jaminan keuangan awalnya diakui dalam laporan keuangan konsolidasian sebesar nilai wajar pada tanggal jaminan diberikan. Nilai wajar dari jaminan keuangan pada saat dimulainya transaksi pada umumnya sama dengan provisi yang diterima untuk jaminan diberikan dengan syarat dan kondisi normal.

Setelah pengakuan awal, liabilitas Bank atas jaminan tersebut diukur pada jumlah yang lebih tinggi antara jumlah awal, dikurangi amortisasi provisi dan estimasi terbaik dari jumlah yang diharapkan akan terjadi untuk menyelesaikan jaminan tersebut. Estimasi ini ditentukan berdasarkan pengalaman transaksi yang sejenis dan kerugian historis masa lalu, dilengkapi dengan penilaian manajemen.

Estimasi ini ditentukan berdasarkan kemiripan transaksi dan sejarah kerugian di masa lalu, dilengkapi dengan justifikasi dari manajemen. Pendapatan provisi yang diperoleh diamortisasi selama jangka waktu jaminan dengan menggunakan metode garis lurus.

Financial guarantee contracts and commitments

Financial guarantee contracts are contracts that require the issuer to make specified payments to reimburse the contracts holder for a loss incurred because a specified debtor defaulted to make payments when due, in accordance with the terms of a debt instrument.

Such financial guarantees are given to banks, financial institutions and other institutions on behalf of customers to secure loans and other banking facilities.

Financial guarantees are initially recognised in the consolidated financial statements at fair value on the date which the guarantee was given. The fair value of a financial guarantee at inception is likely to equal with the provision received because all guarantees are agreed on arm's length terms.

Subsequent to initial recognition, the Bank's liabilities under such guarantees are measured at the higher amount between the initial amount, less amortisation of provision recognised, and the best estimates of the amount required to settle the guarantee. These estimation are determined based on experience of similar transactions and history of past losses, supplemented by the judgement from management.

These estimation are determined based on experience of similar transactions and history of past losses, supplemented by the judgement from management. The provision income earned is amortised over the period of guarantees using the straight-line method.

c. Instrumen keuangan (lanjutan)

xi. Penentuan nilai wajar (lanjutan)

Ketika tidak terdapat pasar aktif atau harga suatu instrumen keuangan yang identik tidak dapat diobservasi, Grup dapat mengukur nilai wajar menggunakan teknik penilaian sesuai jenis instrumen keuangan.

Grup dapat melakukan pengukuran nilai wajar, dengan hirarki sebagai berikut:
1. Input *Level* 1, yaitu harga kuotasian (tanpa penyesuaian) di pasar aktif untuk aset atau liabilitas yang identik yang dapat diakses Grup pada tanggal pengukuran.
2. Input *Level* 2, yaitu input selain harga kuotasian yang termasuk dalam *level* 1 yang dapat diobservasi untuk aset atau liabilitas, baik secara langsung atau tidak langsung.
3. Input *Level* 3, yaitu input yang tidak dapat diobservasi untuk aset atau liabilitas.

Pengukuran nilai wajar mengasumsikan bahwa transaksi untuk menjual aset atau mengalihkan liabilitas terjadi:
- Di pasar utama untuk aset dan liabilitas tersebut; atau
- Jika tidak terdapat pasar utama, di pasar yang paling menguntungkan untuk aset atau liabilitas tersebut.

Nilai wajar suatu aset atau liabilitas diukur menggunakan asumsi yang akan digunakan pelaku pasar ketika menentukan harga aset dan liabilitas tersebut dengan asumsi bahwa pelaku pasar bertindak dalam kepentingan ekonomi terbaiknya.

Pengukuran nilai wajar aset non-keuangan memperhitungkan kemampuan pelaku pasar untuk menghasilkan manfaat ekonomi dengan menggunakan aset dalam penggunaan tertinggi dan terbaiknya atau dengan menjualnya kepada pelaku pasar lain yang akan menggunakan aset tersebut dalam penggunaan tertinggi dan terbaiknya.

c. Financial instruments *(continued)*

xi. Determination of fair value *(continued)*

When there is no active market or the price of an identical financial instrument cannot be observed, the Group can measure fair value using valuation techniques according to the type of financial instrument.

The Group can measure fair value, with the following hierarchy:
1. Input Level 1, the quoted prices (unadjusted) in active markets for identical assets or liabilities that the Group can access at the measurement date.

2. Input Level 2, the input other than quoted price included in level 1 that can be observed for assets or liabilities, either directly or indirectly.

3. Input Level 3, the unobservable input for an asset or liability.

A fair value measurement assumes that the transaction to sell the asset or transfer the liability takes place either:
- *In the principal market for the asset or liability; or*
- *In the absence of a principal market, in the most advantageous market for the asset or liability.*

The fair value of an asset or a liability should be measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their best economic interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset at its highest and best use or by selling it to another market participant that would use the asset at its highest and best use.

2. INFORMASI KEBIJAKAN AKUNTANSI MATERIAL (lanjutan)

c. Instrumen keuangan (lanjutan)

xi. Penentuan nilai wajar (lanjutan)

Nilai wajar untuk instrumen keuangan yang diperdagangkan di pasar aktif, seperti efek-efek dan obligasi pemerintah, ditentukan berdasarkan nilai pasar yang berlaku pada tanggal laporan posisi keuangan konsolidasian menggunakan harga yang dipublikasikan secara rutin dan berasal dari sumber yang terpercaya, seperti Bloomberg, Reuters atau harga yang diberikan oleh broker (harga kuotasian). Investasi dalam unit reksa dana dinyatakan sebesar nilai pasar sesuai nilai aset bersih dari reksa dana pada tanggal laporan posisi keuangan konsolidasian.

Instrumen keuangan dianggap memiliki kuotasi di pasar aktif, jika harga kuotasi tersedia sewaktu-waktu dan dapat diperoleh secara rutin dari bursa, pedagang efek (*dealer*), perantara efek (*broker*) dan harga tersebut mencerminkan transaksi pasar yang aktual dan rutin dalam suatu transaksi yang wajar. Jika kriteria di atas tidak terpenuhi, maka pasar aktif dinyatakan tidak tersedia. Indikasi-indikasi dari pasar tidak aktif adalah terdapat selisih yang besar antara harga penawaran dan permintaan atau kenaikan signifikan dalam selisih harga penawaran dan permintaan dan hanya terdapat beberapa transaksi terkini.

Untuk efek-efek yang tidak mempunyai harga pasar, estimasi atas nilai wajar efek-efek ditetapkan dengan mengacu pada nilai wajar instrumen lain yang substansinya sama atau dihitung berdasarkan arus kas yang diharapkan terhadap aset bersih efek-efek tersebut.

Untuk obligasi pemerintah yang tidak memiliki nilai pasar, estimasi nilai wajar ditentukan dengan menggunakan model internal berdasarkan nilai kini dari arus kas masa depan yang diharapkan (pendekatan *next-repricing method*) dengan menggunakan faktor *deflator*.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

c. Financial instruments *(continued)*

xi. Determination of fair value *(continued)*

The fair value of financial instruments traded in active markets, such as marketable securities and government bonds, is determined based on quoted market prices at the consolidated statement of financial position date using price that published regularly and from credible sources such as quoted market prices from Bloomberg, Reuters or broker's quoted price. Investments in mutual fund units are stated at market value, in accordance with the net value of mutual fund assets at the consolidated statement of financial position date.

A financial instrument is deemed to be quoted in an active market if quoted prices are available at any time and can be obtained regularly from stock exchanges, dealers, and brokers and these prices reflect actual and regular market transactions in a fair transaction. If the criteria above are not met, the active market is declared unavailable. Indications of an inactive market are that there is a large gap between the bid and ask prices or a significant increase in the difference between the bid and ask prices, and there are only a few recent transactions.

For marketable securities with no quoted market price, a reasonable estimate of the fair value is determined by reference to the current market value of another instrument which substantially has the same characteristic or calculated based on the expected cash flows of the underlying net asset base of the marketable securities.

For government bonds with no quoted market prices, a reasonable estimate of the fair value is determined using the internal model based on the present value of expected future cash flows using the next-repricing method approach with a deflator factor.

xii. Reformasi acuan suku bunga

Untuk pengukuran instrumen keuangan yang menggunakan biaya perolehan diamortisasi (aset keuangan instrumen utang yang diklasifikasikan sebagai biaya perolehan diamortisasi dan nilai wajar melalui penghasilan komprehensif lain, serta liabilitas keuangan yang diukur pada biaya perolehan diamortisasi), perubahan arus kas kontraktual masa depan dari instrumen keuangan tersebut yang terjadi akibat reformasi suku bunga (perubahan suku bunga acuan kontraktual dari sebelumnya suku bunga LIBOR menjadi suku bunga acuan alternatif) akan mengubah tingkat suku bunga efektif instrumen keuangan tersebut. Perubahan arus kas kontraktual tersebut tidak mempengaruhi biaya perolehan diamortisasi instrumen keuangan dimaksud, dan tidak berdampak pada laba atau rugi (penerapan praktis). Penerapan praktis tersebut dapat diterapkan jika dan hanya jika 2 (dua) persyaratan berikut terpenuhi:

1. Perubahan arus kas kontraktual tersebut diperlukan sebagai akibat langsung dari reformasi acuan suku bunga; dan
2. Suku bunga acuan alternatif pengganti secara ekonomis setara (*economically equivalent*) dengan suku bunga acuan yang digunakan sebelumnya.

a) Kekuasaan atas Entitas Anak (hak yang ada saat ini yang mempengaruhi kemampuan kini untuk mengarahkan aktivitas relevan yang secara signifikan mempengaruhi imbal hasil Entitas Anak).
b) Eksposur atau hak atas imbal hasil variabel dari keterlibatannya dengan Entitas Anak.
c) Kemampuan untuk menggunakan kekuasaannya atas Entitas Anak untuk mempengaruhi jumlah imbal hasil Bank.

xii. Interest rate benchmark reform

For the measurement of financial instruments using amortised cost (financial assets of debt instruments classified as amortised cost and fair value through other comprehensive income, as well as financial liabilities measured at amortised cost), changes in the future contractual cash flows of those financial instruments occurs as a result of interest rate reform (change in the contractual benchmark interest rate from the previous LIBOR interest rate to an alternative benchmark interest rate) will change the effective interest rate of the financial instrument. The change in contractual cash flows does not affect the amortised cost of the financial instrument, and has no impact on profit or loss (practical expedient). Such practical expedient can be applied if and only if the following 2 (two) requirements are met:

1. *The change in contractual cash flows is necessary as a direct result of the reform of benchmark interest rates; and*
2. *The alternative reference interest rate is economically equivalent to the previously used benchmark interest rate.*

d. Principles of consolidation

The consolidated financial statements include the financial statement of Bank Mandiri and its Subsidiaries in which the majority shares are owned or controlled by Bank Mandiri.

Control is presumed to exist where the Bank is exposed, or has rights, to variable returns from its involvement with the Subsidiaries and has ability to use its power to affect its returns from its involvement with the Subsidiaries.

The Bank controls the Subsidiaries if and only if the Bank acquires these rights:

a) Power over the Subsidiaries (has existing rights that affect the current ability to direct the relevant activities, that significantly affect the Subsidiaries' returns).
b) Exposure or rights of variable returns from its involvement with the Subsidiaries.
c) The ability to use its power over the Subsidiaries to affect the amount of the Bank's returns.

d. Prinsip-prinsip konsolidasian (lanjutan)

Pada laporan keuangan konsolidasian Bank Mandiri, semua saldo dan transaksi yang signifikan antar perusahaan yang dikonsolidasi telah dieliminasi. Kepentingan non-pengendali atas laba bersih Entitas Anak disajikan sebagai pengurang dari laba bersih konsolidasian untuk mendapatkan jumlah laba yang menjadi hak pemilik entitas Bank. Kepentingan non-pengendali dalam aset bersih disajikan sebagai bagian dari ekuitas kecuali kepentingan non-pengendali yang berasal dari konsolidasi atas reksa dana disajikan sebagai bagian dari liabilitas dalam laporan posisi keuangan konsolidasian.

Laporan keuangan konsolidasian disusun dengan menggunakan kebijakan akuntansi yang sama untuk peristiwa dan transaksi sejenis dalam kondisi yang sama. Kebijakan akuntansi yang digunakan dalam laporan keuangan konsolidasian telah diterapkan secara konsisten oleh Entitas Anak, kecuali bila dinyatakan lain.

Bila pengendalian atas suatu entitas diperoleh atau berakhir dalam tahun berjalan, hasil usaha entitas tersebut dimasukkan dalam laporan laba rugi dan penghasilan komprehensif lain konsolidasian sejak tanggal pengendalian dimulai atau sampai dengan tanggal pengendalian berakhir.

Transaksi kombinasi bisnis entitas sepengendali, berupa pengalihan bisnis yang dilakukan dalam rangka reorganisasi entitas-entitas yang berada dalam suatu kelompok usaha yang sama, bukan merupakan perubahan kepemilikan dalam arti substansi ekonomi, sehingga transaksi tersebut tidak dapat menimbulkan laba atau rugi bagi kelompok usaha secara keseluruhan ataupun bagi entitas individual dalam kelompok usaha tersebut.

Oleh karena transaksi kombinasi bisnis entitas sepengendali tidak mengakibatkan perubahan substansi ekonomi kepemilikan atas bisnis yang dipertukarkan, maka transaksi tersebut diakui pada jumlah tercatat berdasarkan metode penyatuan kepemilikan.

Perubahan dalam bagian kepemilikan Bank pada Entitas Anak yang tidak mengakibatkan hilangnya pengendalian dicatat sebagai transaksi ekuitas, dalam hal ini transaksi dengan pemilik dalam kapasitasnya sebagai pemilik. Setiap perbedaan antara jumlah kepentingan nonpengendali disesuaikan dan nilai wajar imbalan yang diberikan atau diterima diakui secara langsung dalam ekuitas dan diatribusikan pada pemilik Entitas Induk.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

d. Principles of consolidation *(continued)*

In the consolidated financial statements of Bank Mandiri, all significant inter-company balances and transactions have been eliminated. The non-controlling interest net income of Subsidiaries is presented as a deduction to consolidated net income in order to present the Bank's income. Non-controlling interest in net assets is presented as part of equity in the consolidated statement of financial position, except for non-controlling interest from mutual fund consolidation is presented as part of liabilities in the consolidated statement of financial position.

The consolidated financial statements are prepared using a consistent accounting policy for transactions and events in similar circumstances. The accounting policies adopted in preparing the consolidated financial statements have been consistently applied by the Subsidiaries, unless otherwise stated.

If the control on an entity is obtained or ends in the current year, the entity's net income is included in the consolidated statement of profit or loss and other comprehensive income from the date of acquisition of the control or until the date the control ceased.

Business combination transaction amongst entities under common control, in the form of transfer of business conducted for the reorganisation of entities under common control, does not represent a change of ownership in terms of economic substance, therefore, there shall be no gain or loss recognised by the group as a whole and by individual entities within the group.

Since the business combination transaction amongst entities under common control does not cause any change in the economic substance of ownership of the transferred business, therefore the transaction is recognised at book value using the pooling interest method.

Changes in the Bank's ownership interest in Subsidiaries that do not result in a loss of control are accounted for as an equity transaction, in this case a transaction with owners in their capacity as owners. Any difference between the amount of the adjusted non-controlling interest and the fair value of the consideration paid or received shall be recognised directly in equity and attributable to the owners of the Parent Entity.

i. Aset tetap dan perangkat lunak

Pada tanggal 1 April 2016, Grup melakukan perubahan kebijakan akuntansi atas tanah dari model biaya menjadi model revaluasi. Tanah disajikan sebesar nilai wajar.

Penilaian terhadap tanah dilakukan oleh penilai independen eksternal yang memiliki sertifikasi. Penilaian atas aset tersebut dilakukan secara berkala untuk memastikan bahwa nilai wajar aset yang direvaluasi tidak berbeda secara material dengan nilai tercatatnya.

Jika nilai wajar dari aset yang direvaluasi mengalami perubahan yang signifikan dan fluktuatif, maka perlu direvaluasi secara tahunan, sedangkan jika nilai wajar dari aset yang direvaluasi tidak mengalami perubahan yang signifikan dan fluktuatif, maka perlu dilakukan revaluasi minimal 3 tahun sekali.

Kenaikan nilai tercatat yang timbul dari revaluasi tanah dicatat sebagai "Selisih bersih revaluasi aset tetap" dan disajikan sebagai "Penghasilan komprehensif lain". Penurunan nilai tercatat yang timbul dari revaluasi dicatat sebagai beban pada tahun berjalan. Apabila aset tersebut memiliki saldo "Selisih bersih revaluasi aset tetap" yang disajikan sebagai "penghasilan komprehensif lain", maka selisih penurunan nilai tercatat tersebut dibebankan terhadap "Selisih bersih revaluasi aset tetap" dan sisanya diakui sebagai beban tahun berjalan.

Grup melakukan revaluasi di tahun 2016 untuk tujuan akuntansi dan pajak dimana entitas memperoleh persetujuan dari otoritas perpajakan. Jumlah pajak yang telah dibayar diakui di penghasilan komprehensif lain dan terakumulasi dalam ekuitas dan di-*offset* pada bagian selisih bersih revaluasi aset tetap.

r. Fixed assets, leased assets and liabilities, and intangible assets

i. Fixed assets and software

On 1 April 2016, the Group changed their accounting policy relating to land from cost model into revaluation model. The land is stated at fair value.

Appraisal of the land is performed by a certified external independent appraiser. Assessment of those assets are conducted regularly to ensure that the fair value of the revaluated asset is not materially different from its carrying value.

If the fair value of the revalued asset change significantly and fluctuative, it is necessary to revaluate the assets on an annual basis, whereas if the fair value of the revalued asset does not change significantly, it is necessary to revaluate at a minimum every 3 years.

The increase in the carrying value arising from the revaluation of land is recorded as "Net differences in fixed assets revaluation" and is presented as "Other comprehensive income". Any impairment arising from the revaluation is recorded as expense of the current year. If the asset had a balance of "Net differences in fixed assets revaluation" that is presented as "other comprehensive income", then the impairment difference recorded is charged against "Net differences in fixed assets revaluation" and the rest is recognised as expense of the current year.

Group conducted revaluation in 2016, for accounting and tax purposes where the Group obtained approval from the tax authorities. The amount of taxes paid is recognised in other comprehensive income and accumulated in equity and offset against Net differences in fixed assets revaluation.

SFAS 236 "Impairment of Assets" requires that the carrying amounts of fixed assets are reviewed at each consolidated statement of financial position date to assess whether they are recorded in excess of their recoverable amounts of the fixed assets. If the carrying value exceeds this estimated recoverable amount, assets are written down to their recoverable amounts of the fixed assets.

ii. Leased assets and liabilities

The Group has implemented SFAS 116 "Lease" since 1 January 2020.

SFAS 116 applies new or amended requirements with respect to lease accounting. This standard introduces significant changes to lessee accounting by eliminating the distinction between operating and financing leases, and requires recognition of right-of-use assets and recognition of lease liabilities at lease inception for all leases, except for short-term leases and leases of low-value assets. In contrast to lessee accounting, the requirements for lessor accounting are mostly unchanged.

PSAK 116 menentukan apakah kontrak merupakan, atau mengandung sewa atas dasar jika penyewa memiliki hak untuk mengendalikan penggunaan aset selama suatu jangka waktu tertentu untuk dipertukarkan dengan imbalan.

Grup mengakui aset hak guna pada tanggal dimulainya sewa. Aset hak guna diukur pada biaya perolehan, dikurangi akumulasi penyusutan dan kerugian penurunan nilai, dan disesuaikan untuk setiap pengukuran kembali liabilitas sewa. Liabilitas sewa merupakan jumlah pembayaran sewa yang masih harus dibayar hingga akhir masa sewa yang didiskontokan dengan menggunakan suku bunga pinjaman inkremental. Biaya aset hak guna mencakup jumlah liabilitas sewa yang diakui, biaya langsung awal yang dibayarkan, biaya pemulihan dan pembayaran sewa yang dilakukan pada atau sebelum tanggal mulai sewa dikurangi insentif sewa yang diterima. Aset hak guna disusutkan dengan metode garis lurus selama jangka waktu yang lebih pendek antara masa sewa dengan estimasi masa manfaat aset, sebagai berikut:

r. Fixed assets, leased assets and liabilities, and intangible assets (continued)

ii. Leased assets and liabilities *(continued)*

SFAS 116 determines whether a contract is, or contains a lease on the basis that the lessee has the right to control the use of the asset for a specified period of time in exchange for certain consideration.

The Group uses a single discount rate for lease portfolios with similar characteristics.

The Group applies a single recognition and measurement approach to all leases, except for short-term leases and low-value asset leases. The Group recognises a lease liabilities to make lease payments and rights of use assets that represent the right to use the underlying asset.

The Group recognised the rights of use assets at the inception date of the lease. The rights of use assets are measured at cost, less accumulated depreciation and impairment losses, and adjusted for any remeasurement of the lease liabilities. Lease liabilities are the amount of lease payments accrued until the end of the lease term, discounted using the incremental loan interest rate. The cost of right of use assets includes the amount of lease liability recognised, initial direct costs paid, recovery costs and lease payments made on or before the start date of the lease less lease incentives received. Rights of use assets are depreciated using the straight-line method over the shorter period between the lease term and the estimated useful life of the asset, as follows:

- Bangunan	: 20 tahun/*years*	*Buildings*	-
- Mesin kantor	: 5 tahun/*years*	*Office machines*	-
- Komputer perangkat keras	: 5 tahun/*years*	*Computer hardware*	-

r. Aset tetap, aset dan liabilitas sewa dan aset takberwujud (lanjutan)

ii. Aset dan liabilitas sewa (lanjutan)

Jika kepemilikan aset sewa dialihkan ke Grup pada akhir masa sewa atau pembayaran sewa mencerminkan pelaksanaan opsi pembelian, penyusutan dihitung menggunakan estimasi masa manfaat ekonomis aset. Aset hak guna diuji penurunan nilainya sesuai dengan PSAK 236 "Penurunan Nilai Aset".

Pada tanggal dimulainya sewa, Grup mengakui liabilitas sewa yang diukur pada nilai kini dari pembayaran sewa masa depan yang akan dilakukan selama masa sewa. Pembayaran sewa termasuk pembayaran tetap (termasuk pembayaran tetap secara-substansi) dikurangi piutang insentif sewa, pembayaran sewa variabel yang bergantung pada indeks atau suku bunga, dan jumlah yang diharapkan akan dibayar dalam jaminan nilai residu. Pembayaran sewa juga termasuk harga eksekusi opsi pembelian yang wajar jika dipastikan akan dilakukan oleh Grup dan pembayaran penalti untuk mengakhiri sewa, jika jangka waktu sewa mencerminkan Grup mengeksekusi opsi penghentian sewa. Pembayaran sewa variabel yang tidak bergantung pada indeks atau suku bunga diakui sebagai beban pada periode di mana peristiwa atau kondisi yang memicu pembayaran terjadi.

Dalam menghitung nilai kini dari pembayaran sewa, Grup menggunakan suku bunga pinjaman inkremental penyewa pada tanggal dimulainya sewa karena suku bunga implisit dalam sewa tidak dapat ditentukan. Setelah tanggal dimulainya sewa, jumlah liabilitas sewa ditingkatkan untuk mencerminkan pertambahan bunga dan dikurangi pembayaran sewa yang dilakukan. Selain itu, jumlah tercatat liabilitas sewa diukur kembali jika terdapat modifikasi, perubahan jangka waktu sewa, perubahan pembayaran sewa, atau perubahan dalam penilaian opsi untuk membeli aset pendasar.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

r. Fixed assets, leased assets and liabilities, and intangible assets *(continued)*

ii. Leased assets and liabilities *(continued)*

If the ownership of the leased asset is transferred to the Group at the end of the lease term or the lease payments reflect the exercise of the purchase option, depreciation is calculated using the estimated useful life of the asset. Rights of use assets are assessed for impairment in accordance with SFAS 236 "Impairment of Assets".

At the inception date of the lease, the Group recognises lease liabilities which measured at the present value of future lease payments to be made over the lease term. Lease payments include fixed payments (including substantially fixed payments) less lease incentive receivables, variable lease payments that are index or interest rate dependent, and the amount expected to be paid in a residual value guarantee. Lease payments also include the reasonable exercise price for the purchase option if it is determined to be made by the Group and the payment of a penalty to terminate the lease, if the lease term reflects the Group exercising the lease termination option. Variable lease payments that are not dependent on an index or interest rate are recognised as an expense in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Group uses the incremental loan interest rate of the lessee at the inception date of the lease because the interest rate implicit in the lease cannot be determined. After the inception date of the lease, the amount of the lease liability is increased to reflect the increase in interest and less lease payments made. In addition, the carrying amount of the lease liability is remeasured if there are modifications, changes in the term of the lease, changes in lease payments, or changes in the valuation of the option to purchase the underlying asset.

z. Liabilitas kontrak asuransi

Kontrak asuransi adalah kontrak yang diterbitkan oleh perusahaan asuransi dimana perusahaan asuransi menerima risiko asuransi yang signifikan dari pemegang polis. Risiko asuransi yang signifikan didefinisikan sebagai kemungkinan membayar manfaat yang signifikan kepada tertanggung apabila suatu kejadian atas risiko yang diasuransikan terjadi dibandingkan dengan manfaat minimum yang akan dibayarkan apabila risiko yang diasuransikan tidak terjadi. Skenario-skenario yang diperhatikan adalah skenario yang mengandung unsur komersial.

Sejak 1 Januari 2025

Berdasarkan PSAK 117, kontrak asuransi dikelompokkan menjadi kelompok-kelompok untuk tujuan pengukuran. Kelompok kontrak asuransi ditentukan dengan mengidentifikasi portofolio kontrak asuransi, di mana setiap portofolio terdiri dari kelompok kontrak dengan risiko yang serupa yang dikelola bersama. Portofolio tersebut dibagi lebih lanjut berdasarkan profitabilitas kontrak menjadi tiga kategori: kontrak yang merugikan, kontrak yang tidak memiliki risiko signifikan untuk menjadi merugikan, dan kontrak yang tersisa. Kontrak asuransi juga dikelompokkan menjadi kohort tahunan (yaitu berdasarkan tahun penerbitan). Portofolio kontrak reasuransi yang dimiliki dinilai untuk agregasi secara terpisah dari portofolio kontrak asuransi yang diterbitkan.

Kontrak asuransi diukur menggunakan Modal Pengukuan Umum (MPU), Pendekatan Biaya Variabel (PBV), atau *Premium Allocation Approach* (*PAA*). Entitas anak umumnya menggunakan MPU dan PBV (untuk kontrak yang memiliki fitur partisipasi langsung, misalnya kontrak *unit-link*), tergantung pada karakteristik spesifik dari kontrak asuransi tersebut.

Significant insurance risk is defined as the possibility of paying significantly more benefit to the policyholder upon the occurrence of insured event on the risk covered compared to the minimum benefit payable in a scenario where the insured event on the risk covered does not occur. Scenarios that are considered are those with commercial substance.

Since 1 January 2025

Under SFAS 117, insurance contracts are aggregated into groups for measurement purposes. Groups of insurance contracts are determined by identifying portfolios of insurance contracts, where each portfolio comprise group of contracts with similar risks which are managed together. The portfolios are further divided based on the profitability of contracts into three categories: onerous contracts, contracts with no significant risk of becoming onerous, and the remaining contracts. The insurance contracts are also grouped into annual cohorts (i.e. by year of issue). Portfolios of reinsurance contracts held are assessed for aggregation separately from portfolios of insurance contracts issued.

Insurance contracts are measured under the General Measurement Model (GMM), Variable Fee Approach ("VFA") or Premium Allocation Approach ("PAA"). The Subsidiary predominantly uses the GMM and VFA (for contract that have direct participation features, such as unit-linked contracts), depending on the specific characteristics of the insurance contracts.

- Arus kas pemenuhan, yang terdiri dari estimasi terbaik nilai kini arus kas masa depan dalam batas kontrak yang diharapkan akan muncul, serta penyesuaian risiko eksplisit untuk risiko non-keuangan; dan
- *Contractual Service Margin (CSM*) yang mewakili penundaan keuntungan yang muncul pada pengakuan awal.

Entitas anak mengakui kelompok kontrak asuransi yang diterbitkan dari yang paling awal di antara hal-hal berikut:

- Awal periode perlindungan kelompok kontrak;
- Tanggal ketika pembayaran premi pertama dari pemegang polis dalam kelompok jatuh tempo; dan
- Untuk kelompok kontrak yang merugikan, segera setelah fakta dan keadaan menunjukkan bahwa kelompok tersebut merugikan.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

z. Insurance contract liabilities *(continued)*

Since 1 January 2025 (continued)

Initial recognition and contract boundary

Groups of insurance contracts are measured on initial recognition as the total of:

- *Fulfilment cash flows, comprising the best estimate of the present value of future cash flows within the contract boundary that are expected to arise and an explicit risk adjustment for non-financial risk; and*
- *A Contractual Service Margin (CSM) that represents the deferral of any day-one gains arising on initial recognition.*

The Subsidiary recognises groups of insurance contracts issued from the earliest of the following:

- *The beginning of the coverage period of the group of contracts;*
- *The date when first premium payment from policyholder in the group becomes due; and*
- *For a group of onerous contracts, as soon as facts and circumstances indicate that the group is onerous.*

The contract boundary defines which future cash flows are included in the measurement of a contract. The end of the contract boundary is considered to be at the point when the Subsidiary no longer has substantive rights and obligations under the insurance contract to provide services or compel the policyholder to pay premiums.

Liabilities to policyholders Subsidiary are recorded in the consolidated statement of financial position as part of "Insurance Contract Liabilities" based on actuarial calculations using actuarial assumptions.

The Subsidiary disaggregates the amounts recognised in the statement of profit or loss and other comprehensive income into a insurance service result, comprising insurance revenue and insurance service expenses, and insurance finance income or expenses.

Contractual Service Margin ("CSM")

CSM disesuaikan pada setiap periode pelaporan untuk perubahan arus kas masa depan yang diharapkan yang disebabkan oleh perubahan asumsi teknis atau asumsi estimasi terbaik (kematian, morbiditas, umur panjang, *lapse* atau penarikan, biaya. Namun, jika perubahan negatif pada arus kas masa depan yang didiskontokan lebih besar dari sisa CSM, selisihnya segera diakui dalam laporan laba rugi dan penghasilan komprehensif lain konsolidasian karena kontrak asuransi menjadi merugi dan CSM tidak boleh negatif. *Interest* juga diakumulasikan pada CSM dengan tingkat bunga yang dikunci pada saat pengakuan awal kontrak (yaitu tingkat diskonto yang digunakan pada saat awal untuk menentukan nilai sekarang dari arus kas masa depan yang diperkirakan).

CSM akan *released* ke laba atau rugi berdasarkan unit pertanggungan, mencerminkan jumlah manfaat yang diberikan dan durasi pertanggungan yang diharapkan dari kontrak yang tersisa dalam kelompok kontrak asuransi. Mengingat keragaman kontrak asuransi, definisi unit pertanggungan melibatkan penggunaan penilaian dengan mempertimbangkan tingkat pertanggungan yang ditetapkan dalam kontrak berdasarkan maksimum manfaat asuransi (misalnya manfaat kematian, saldo pinjaman yang belum dibayar, nilai akun pemegang polis ditambah manfaat kematian, maksimum manfaat kesehatan) dan durasi pertanggungan ng diharapkan dari kontrak.

Komponen kerugian

Entitas anak telah mengelompokkan kontrak yang merugikan pada pengakuan awal secara terpisah dari kontrak dalam portofolio yang sama yang tidak merugikan pada pengakuan awal. Kelompok yang tidak merugikan pada pengakuan awal juga dapat menjadi merugikan jika asumsi dan pengalaman berubah. Entitas Anak telah menetapkan komponen kerugian dari kewajiban untuk perlindungan yang tersisa untuk setiap kelompok merugikan yang menggambarkan kerugian masa depan yang diakui.

Komponen kerugian dilepaskan berdasarkan alokasi sistematis dari perubahan selanjutnya dalam arus kas pemenuhan kepada: (i) komponen kerugian; dan (ii) kewajiban untuk perlindungan yang tersisa, tidak termasuk komponen kerugian. Komponen kerugian juga diperbarui untuk perubahan selanjutnya dalam estimasi arus kas pemenuhan yang terkait dengan layanan masa depan.

Contractual Service Margin ("CSM")

The CSM is adjusted at each subsequent reporting period for changes in expected future cash flows driven by changes in technical assumptions or best estimate assumptions (death, morbidity, longevity, surrenders, expenses). However, if negative changes in future discounted cash flows are greater than the remaining CSM, the difference is immediately recognized in the consolidated statement of profit or loss and other comprehensive income as the insurance contract become onerous and the CSM cannot be negative. Interest is also accreted on the CSM at rates locked in at initial recognition of a contract (i.e., discount rate used at inception to determine the present value of the estimated future cash flows).

The CSM will be released into profit or loss based on coverage units, reflecting the quantity of the benefits provided and the expected coverage duration of the remaining contracts in the insurance group of contract. Given the variety of insurance contracts, the definition of coverage units involves the use of judgment by considering both the level of coverage defined within the contract based on the maximum of insurance benefit (e.g. a death benefit, outstanding loan balance, the policyholders' account value plus death benefit, maximum of health benefit) and the expected coverage duration of the contract.

Loss components

The Subsidiary has grouped contracts that are onerous at initial recognition separately from contracts in the same portfolio that are not onerous at initial recognition. Groups that were not onerous at initial recognition can also subsequently become onerous if assumptions and experience changes. The Subsudiary has established a loss component of the liability for remaining coverage for any onerous group depicting the future losses recognised.

The loss component is released based on a systematic allocation of the subsequent changes in the fulfilment cash flows to: (i) the loss component; and (ii) the liability for remaining coverage excluding the loss component. The loss component is also updated for subsequent changes in estimates of the fulfilment cash flows related to future service.

Komponen kerugian (lanjutan)

Alokasi sistematis dari perubahan selanjutnya ke komponen kerugian mengakibatkan jumlah total yang dialokasikan ke komponen kerugian menjadi sama dengan nol pada akhir periode perlindungan dari sekelompok kontrak (karena komponen kerugian akan terwujud dalam bentuk klaim yang terjadi). Entitas Anak menggunakan proporsi pada pengakuan awal untuk menentukan alokasi sistematis dari perubahan selanjutnya dalam arus kas masa depan antara komponen kerugian dan kewajiban untuk perlindungan yang tersisa, tidak termasuk komponen kerugian.

Setiap bunga, keuntungan atau kerugian dari kenaikan atau penurunan nilai pasar investasi dicatat sebagai pendapatan atau beban, disertai dengan pengakuan kenaikan atau penurunan liabilitas kepada pemegang polis *unit-link* di laporan laba rugi dan penghasilan komprehensif lain konsolidasian dan liabilitas kepada pemegang polis *unit-link* di laporan posisi keuangan konsolidasian.

Loss components (continued)

The systematic allocation of subsequent changes to the loss component results in the total amounts allocated to the loss component being equal to zero by the end of the coverage period of a group of contracts (since the loss component will have been materialised in the form of incurred claims). The Subsidiary uses the proportion on initial recognition to determine the systematic allocation of subsequent changes in future cash flows between the loss component and the liability for remaining coverage excluding the loss component.

Any interest, gain or loss due to increases or decreases in market value of investments are recorded as income or expense, with a corresponding recognition of increase or decrease in liability to unit-link policyholders in the statement of profit or loss and other comprehensive income and liability to unit-link policyholders in the consolidated statement of financial position.

Insurance finance income and expense

Insurance finance income or expenses comprise the change in the carrying amount of the group of insurance contracts arising from:

- *The effect of the time value of money and changes in the time value of money.*

ad. Perpajakan (lanjutan)

Bank Mandiri dan Entitas Anak menerapkan metode liabilitas laporan posisi keuangan (*balance sheet liability method*) untuk menentukan beban pajak penghasilan. Menurut metode liabilitas laporan posisi keuangan, aset dan utang pajak tangguhan diakui untuk semua perbedaan temporer antara nilai aset dan liabilitas yang tercatat di laporan posisi keuangan dengan dasar pengenaan pajak atas aset dan liabilitas tersebut pada setiap tanggal pelaporan. Metode ini juga mensyaratkan adanya pengakuan manfaat pajak di masa datang yang belum digunakan apabila besar kemungkinan bahwa manfaat tersebut dapat direalisasikan di masa yang akan datang.

Aset pajak tangguhan diakui apabila terdapat kemungkinan besar bahwa jumlah laba fiskal pada masa datang akan memadai untuk mengkompensasi aset pajak tangguhan yang muncul akibat perbedaan temporer.

Pajak tangguhan dihitung dengan menggunakan tarif pajak yang berlaku atau secara substansial diberlakukan pada periode dimana aset tersebut direalisasi atau liabilitas tersebut diselesaikan. Perubahan nilai tercatat aset dan liabilitas pajak tangguhan yang disebabkan oleh perubahan tarif pajak dibebankan pada laporan laba rugi dan penghasilan komprehensif lain konsolidasian tahun berjalan, kecuali untuk transaksi-transaksi yang sebelumnya telah langsung dibebankan atau dikreditkan ke ekuitas.

Koreksi atas liabilitas pajak diakui pada saat surat ketetapan pajak diterima, atau apabila diajukan keberatan dan/atau banding, maka koreksi diakui pada saat keputusan atas keberatan dan/atau banding tersebut diterima. Manajemen juga dapat membentuk pencadangan terhadap liabilitas pajak di masa depan sebesar jumlah yang diestimasikan akan dibayarkan ke kantor pajak jika berdasarkan evaluasi pada tanggal laporan posisi keuangan konsolidasian terdapat risiko pajak yang *probable*. Asumsi dan estimasi yang digunakan dalam perhitungan pembentukan cadangan tersebut memiliki unsur ketidakpastian.

Taksiran pajak penghasilan Bank Mandiri dan Entitas Anak dihitung untuk masing-masing perusahaan sebagai badan hukum terpisah. Aset pajak kini *(current tax assets)* dan liabilitas pajak kini *(current tax liabilities)* untuk badan hukum yang berbeda tidak disalinghapuskan dalam laporan keuangan konsolidasian. Utang pajak penghasilan badan dan utang pajak lainnya Bank Mandiri dan Entitas Anak disajikan sebagai "Utang pajak" di laporan posisi keuangan konsolidasian.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

ad. Income tax *(continued)*

Bank Mandiri and Subsidiaries apply the balance sheet liability method to determine income tax expense. Under the balance sheet liability method, deferred tax assets and liabilities are recognised for all temporary differences arising between the tax base of assets and liabilities and their carrying amount in the consolidated statement of financial position at each reporting date. This method also requires the recognition of unused future tax benefits, to the extent that realisation of such benefits are probable in the future.

Deferred tax assets are recognised only to the extent that is probable that future taxable income will be sufficient to compensate deferred tax asset arising from temporary differences.

Deferred tax is calculated using tax rates enacted or substantively applied to the period during which the asset is realised or the liability is settled. The changes to the carrying value of deferred tax assets and liabilities due to the changes of tax rates are charged in the current year, consolidated statement of profit or loss and other comprehensive income except for transactions which previously have been directly charged or credited to equity.

Adjustments to taxation obligations are recognised when tax assessment letter is received or, if objection/appeal is submitted, adjustments are recognised when the result of objection/appeal is received. Management provides provision for future tax liability at the estimated amount that will be payable to the tax office if there is a probable tax exposure, based on management's assessment as of the date of consolidated statement of financial position. Assumptions and estimation used in the calculation of provision may involve element of uncertainty.

The estimated corporate income tax of Bank Mandiri and Subsidiaries are calculated for each company as a separate legal entity. Current tax assets and current tax liabilities for different legal income entities cannot be set-off in the consolidated financial statements. Corporate tax payables and other tax payables of Bank Mandiri and Subsidiaries are presented as "Taxes payable" in the consolidated statement of financial position.

ae. Temporary syirkah funds

Apabila manfaat pensiun lebih kecil dari pada manfaat menurut UU Cipta Kerja No. 11/2020, maka Bank dan Entitas Anak membayar kekurangan tersebut.

Program pensiun berdasarkan UU Ketenagakerjaan adalah program imbalan pasti karena UU Ketenagakerjaan menentukan rumus tertentu untuk menghitung jumlah minimum imbalan pensiun. Program pensiun iuran pasti adalah program pensiun yang iurannya ditetapkan dalam peraturan dana pensiun dan seluruh iuran serta hasil pengembangannya dibukukan pada rekening masing-masing peserta sebagai manfaat pensiun sebagaimana tercantum dalam UU No. 4 tahun 2023 tanggal 12 Januari 2023 tentang Pengembangan dan Penguatan Sektor Keuangan.

2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

ai. Employee benefits *(continued)*

Pension liability *(continued)*

Bank Mandiri and Subsidiaries' pension liability have been calculated by comparing the benefit that will be received by an employee at normal pension age from the Pension Plans with the benefit that will be received as stipulated under the Employment Law No. 13/2003 which has been updated using the Employment Regulations No. 11/2020 as amended by UU No. 6/2023 regarding Government In Lieu Of Law No. 2 Of 2022 regarding Stipulation Employment Regulations Become Law based on the Collective Labor Agreement which was renewed at the end of 2021 after deducting accumulated employee contributions and the results of its investments. If the pension benefit from the Pension Plans is less than the benefit as required by the Employment Regulations No. 11/2020, the Bank and Subsidiaries will have to pay such shortage.

The pension plan based on the Labor Law is a defined benefit plan because the Labor Law sets a certain formula to calculate the minimum pension benefit. A defined contribution plan is a pension plan that defines an amount of pension contribution based on pension fund regulation and all contribution including investment return are recorded in its account's member as pension benefit as stated in Law No. 4 year 2023 dated 12 January 2023 regarding Development and Strengthening Financial Sector.

The defined benefit pension liability recognised in the consolidated statement of financial position is the present value of the defined benefit obligation at the consolidated statement of financial position date less the fair value of plan assets, adjusted with unrealised actuarial gains or losses and past service cost. The defined benefit obligation is calculated annually by independent actuaries using the projected unit credit method on a regular basis for periods not exceeding one year. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using the discount rate of government bonds' yield that are denominated in the currency in which the benefit will be paid, and that have terms to maturity approximating the terms of the related pension liability.

ao. Aset dan liabilitas tidak lancar (atau kelompok lepasan) dikuasai untuk dijual

Aset tidak lancar (atau kelompok lepasan) yang dikuasai untuk dijual merupakan aset yang nilai tercatatnya akan dipulihkan terutama melalui transaksi penjualan daripada penggunaan berlanjut dalam bisnis dan penjualannya sangat mungkin terjadi. Aset ini dicatat pada nilai yang lebih rendah antara jumlah tercatat dan nilai wajar setelah dikurangi biaya untuk menjual, kecuali untuk aset-aset seperti aset pajak tangguhan, aset yang terkait dengan imbalan kerja, dan aset keuangan, yang secara khusus dikecualikan.

Aset tidak lancar (atau kelompok lepasan) yang dikuasai untuk dijual tidak dilakukan penyusutan dan amortisasi selama diklasifikasikan sebagai aset tidak lancar yang dikuasai untuk dijual. 2. MATERIAL ACCOUNTING POLICY INFORMATION *(continued)*

an. Business combination of common control entities *(continued)*

Therefore, the transaction is recognised at carrying value based on the pooling of the interest method. The difference between the total consideration received or paid and the carrying amount of investment is recorded under equity and presented as a component of additional paid in capital.

In the Parent Entity financial information, the Bank records its investment value in the new entity at cost using the predecessor value, where the investment is recorded at book value.

ao. Non-current assets and liabilities (or disposal group) held for sale

Non-current assets (or disposal groups) held for sale are assets whose carrying amount will be recovered primarily through a sale transaction rather than through continued use in the business, and their sale is highly probable. These assets are recorded at the lower of carrying amount and fair value, with fewer costs to sell, except for assets such as deferred tax assets, assets related to employee benefits, and financial assets, which are specifically exempted.

Non-current assets (or disposal groups) held for sale are not depreciated or amortised while classified as held for sale. Impairment losses on non-current assets (or disposal groups) held for sale are recognised in the income statement as the difference between the carrying amount and the fair value less costs to sell. Gains on the difference between the carrying amount and the fair value, less costs to sell, are recognised in the income statement up to the amount of any previously recognised impairment loss.

Non-current assets (or disposal groups) held for sale are presented separately from other assets in the statement of financial position, and liabilities (or disposal groups) held for sale are presented separately from other liabilities in the statement of financial position.

3. PENGGUNAAN ESTIMASI DAN PERTIMBANGAN AKUNTANSI YANG PENTING

Beberapa estimasi dan asumsi dibuat dalam rangka penyusunan laporan keuangan konsolidasian dimana dibutuhkan pertimbangan manajemen dalam menentukan metodologi yang tepat untuk penilaian aset dan liabilitas.

Manajemen membuat estimasi dan asumsi yang berimplikasi pada pelaporan nilai aset dan liabilitas atas tahun keuangan satu tahun ke depan. Semua estimasi dan asumsi yang diharuskan oleh Standar Akuntansi Keuangan di Indonesia adalah estimasi terbaik serta berdasarkan pada standar yang berlaku. Estimasi dan pertimbangan dievaluasi secara terus menerus dan berdasarkan pengalaman masa lalu dan faktor-faktor lain termasuk harapan atas kejadian yang akan datang.

Walaupun estimasi dan asumsi ini dibuat berdasarkan pengetahuan terbaik manajemen atas kejadian dan tindakan saat ini, hasil yang timbul mungkin berbeda dengan estimasi dan asumsi semula.

Sumber utama ketidakpastian estimasi

a. Cadangan kerugian penurunan nilai aset keuangan

Evaluasi atas kerugian penurunan nilai aset keuangan yang dicatat pada biaya perolehan diamortisasi dan efek utang yang diklasifikasikan sebagai nilai wajar melalui pendapatan komprehensif lain dijelaskan di Catatan 2c.

Cadangan kerugian penurunan nilai terkait dengan pihak lawan spesifik dalam seluruh cadangan kerugian penurunan nilai dibentuk atas tagihan yang penurunan nilainya dievaluasi secara individual berdasarkan estimasi terbaik manajemen atas nilai tunai arus kas yang diharapkan akan diterima. Dalam menghitung cadangan kerugian penurunan nilai, manajemen membuat pertimbangan mengenai kondisi keuangan dari pihak lawan dan nilai neto yang dapat direalisasi dari agunan yang diterima. Setiap aset yang mengalami penurunan nilai dievaluasi dan strategi penyelesaiannya serta estimasi arus kas yang dinilai dapat diperoleh kembali dan disetujui secara independen oleh *Credit Risk Management Unit*.

Evaluasi cadangan kerugian penurunan nilai secara kolektif meliputi kerugian kredit yang melekat pada portofolio tagihan dengan karakteristik ekonomi yang serupa ketika terdapat kenaikan risiko kredit yang signifikan atau terdapat bukti objektif bahwa telah terjadi penurunan nilai tagihan dalam portofolio tersebut, namun penurunan nilai secara individu belum dapat diidentifikasi.

3. USE OF CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

Several estimates and assumptions are created in the preparation of the consolidated financial statements in which management judgment is required in determining the methodology in the valuation of assets and liabilities.

Management makes estimation and assumptions that affect the reported amounts of assets and liabilities within the one next financial year. All estimation and assumptions required in conformity with Statement of Financial Accounting Standard are the best estimation undertaken in accordance with the applicable standards. Estimation and judgements are evaluated on a continuous basis, and are based on past experience and other factors, including expectations with regard to future events.

Although these estimates and assumptions are based on management's best knowledge of current events and activities, actual results may differ from those estimates and assumptions.

Key sources of estimation uncertainty

a. Allowances for impairment losses of financial assets

Evaluation of impairment losses on financial assets which is recognised at amortised cost and debt securities classified as fair value through other comprehensive income are described in Note 2c.

Allowance for impairment losses related to a specific counterparty as part of the entire allowance for impairment losses are established for receivables that are individually evaluated for impairment based on management's best estimate of the present value of cash flows expected to be received. In calculating the allowance for impairment losses, management makes judgements regarding of the financial condition of the counterparty and the net realizable value of the collateral received. Each impaired asset is evaluated, and its settlement strategy and estimation of cash flows considered recoverable are independently approved by the Credit Risk Management Unit.

Collectively assessed impairment allowances cover credit losses inherent in portfolios with similar economic characteristics when there is a significant increase in credit risk or objective evidence to suggest the impairments are exist within the portfolio, but the individual impaired items cannot yet be identified.

The original consolidated financial statements included herein are in the Indonesian language.

3. PENGGUNAAN ESTIMASI DAN PERTIMBANGAN AKUNTANSI YANG PENTING (lanjutan)

Sumber utama ketidakpastian estimasi (lanjutan)

a. Cadangan kerugian penurunan nilai aset keuangan (lanjutan)

Dalam menentukan perlunya untuk membentuk cadangan kerugian penurunan nilai secara kolektif, manajemen mempertimbangkan faktor-faktor seperti kualitas kredit, besarnya portofolio, konsentrasi kredit, dan faktor-faktor ekonomi. Dalam mengestimasi cadangan yang dibutuhkan, asumsi-asumsi dibuat untuk menentukan model kerugian ekspektasian dan untuk menentukan parameter input yang diperlukan, berdasarkan pengalaman historis, kondisi ekonomi saat ini, dan prakiraan kondisi ekonomi di masa mendatang (*forecasting*). Ketepatan dari cadangan ini bergantung pada seberapa tepat estimasi arus kas masa depan untuk menentukan cadangan individual serta asumsi model dan parameter yang digunakan dalam penentuan cadangan kolektif.

b. Menentukan nilai wajar instrumen keuangan

Dalam menentukan nilai wajar aset dan liabilitas keuangan yang tidak mempunyai harga pasar, Grup menggunakan teknik penilaian seperti yang dijelaskan dalam Catatan 2c untuk instrumen keuangan yang tidak diperdagangkan secara aktif dan memiliki informasi harga yang terbatas, nilai wajar yang kurang objektif dan membutuhkan berbagai tingkat penilaian tergantung pada likuiditas, konsentrasi, faktor ketidakpastian pasar, asumsi harga, dan risiko lainnya.

c. Imbalan pensiun

Program-program pensiun ditentukan berdasarkan perhitungan dari aktuaria. Perhitungan aktuaria menggunakan asumsi-asumsi seperti tingkat diskonto, tingkat pengembalian investasi, tingkat kenaikan gaji, tingkat kematian, tingkat pengunduran diri dan lain-lain (Catatan 2ai dan 51). Perubahan asumsi ini akan mempengaruhi nilai liabilitas pensiun.

Grup menentukan tingkat diskonto yang sesuai pada akhir periode pelaporan, yakni *zero coupon bond* yang digunakan untuk menentukan nilai kini arus kas keluar masa depan estimasian yang diharapkan untuk menyelesaikan liabilitas pensiun.

Dalam menentukan tingkat suku bunga yang sesuai, Grup mempertimbangkan imbal hasil obligasi pemerintah yang didenominasikan dalam mata uang imbalan akan dibayar dan memiliki jangka waktu yang serupa dengan jangka waktu liabilitas pensiun yang terkait. Asumsi kunci liabilitas pensiun lainnya sebagian ditentukan berdasarkan kondisi pasar saat ini.

***3. USE OF CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS** (continued)*

***Key sources of estimation uncertainty** (continued)*

***a. Allowances for impairment losses of financial assets** (continued)*

In determining the need to establish allowance for collective impairment, management considers factors such as credit quality, size of portfolio, credit concentrations, and economic factors. In estimating the required allowance, the assumptions made to determine expected default and loss model and to determine the required input parameters which are based on historical experience and estimated future economic conditions (forecasting). The accuracy of this allowance depends on how precise the estimated future cash flows to determine the individual allowance and the model assumptions and parameters used in determining collective allowance.

b. Determining fair values of financial instruments

In determining the fair value for financial assets and financial liabilities for which there is no observable market price, the Group uses the valuation techniques as described in Note 2c for financial instruments that are traded infrequently and have limited pricing information, fair value is less objective and requires varying degrees of judgement depending on liquidity, concentration, uncertainty of market factors, pricing assumptions and other risks.

c. Pension benefits

Pension programs are determined based on actuarial valuation. The actuarial valuation uses assumptions such as discount rate, expected rate of return on investments, future salary increases, mortality rate, resignation rate and others (refer to Note 2ai and 51). Any changes in those assumptions will impact the liability balance of employee benefit obligations.

The Group determines the appropriate discount rate at the end of each year, which is the zero coupon bond that used to determine the present value of estimated future cash outflows expected to settle the pension obligations.

In determining the appropriate discount rate, the Group considers the government bonds' yields denominated in currency and have similar period with payments that will be made and have terms to maturity approximating the terms of the related employee benefit liability. Other key assumptions for pension obligations mostly are determined based on current market conditions.

d. Kontrak asuransi

Entitas anak mendasarkan asumsi dan estimasinya pada parameter yang tersedia saat laporan keuangan disusun. Namun, keadaan yang ada dan asumsi tentang perkembangan di masa depan dapat berubah akibat perubahan pasar atau keadaan yang muncul di luar kendali Entitas Anak. Perubahan semacam itu akan tercermin dalam asumsi saat perubahan tersebut terjadi.

Sejak tanggal 1 Januari 2025

PSAK 117 berlaku untuk kontrak asuransi yang diterbitkan, kontrak reasuransi yang diterbitkan (bisnis masuk), kontrak reasuransi yang dimiliki (bisnis keluar), dan kontrak investasi dengan fitur partisipasi diskresioner, asalkan Entitas Anak juga menerbitkan kontrak asuransi.

Contractual Service Margin ("CSM")

Entitas Anak melakukan estimasi signifikan dalam pengukuran *Contractual Service Margin (CSM)* dalam penilaian liabilitas asuransi. CSM mewakili laba yang belum direalisasi atas kontrak asuransi dan diamortisasi secara sistematis selama periode pertanggungan.

Estimasi yang digunakan dalam penentuan CSM mencakup proyeksi arus kas masa depan, asumsi tingkat diskonto, estimasi penyesuaian risiko dan asumsi lainnya seperti mortalitas, morbiditas, dan persistensi.

Perubahan asumsi atau estimasi ini dapat berdampak signifikan terhadap jumlah CSM yang diakui. Entitas Anak melakukan tinjauan dan pembaruan estimasi secara berkala, setidaknya setiap akhir periode pelaporan, sesuai dengan perkembangan informasi dan pengalaman aktual

Probability-weighted atas proyeksi arus kas masa depan

Perkiraan arus kas masa depan mencerminkan pandangan Entitas Anak terhadap kondisi saat ini pada tanggal pelaporan, dan perkiraan terhadap variabel pasar yang relevan konsisten dengan harga pasar yang dapat diamati.

Dalam memperkirakan arus kas masa depan, Entitas Anak mempertimbangkan ekspektasi saat ini terhadap peristiwa masa depan yang mungkin mempengaruhi arus kas tersebut.

Key sources of estimation uncertainty *(continued)*

d. Insurance contracts

The Subsidiary based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Subsidiary. Such changes are reflected in the assumptions when they occur.

Since 1 January 2025

PSAK 117 applies to insurance contracts issued, reinsurance contracts issued (inward business), reinsurance contracts held (outward business) and investment contracts with discretionary participation features provided the The Subsidiary also issues insurance contracts.

Contractual Service Margin ("CSM")

The Subsidiary makes significant estimates in measuring the Contractual Service Margin (CSM). The CSM represents the unearned profit for insurance contracts and is systematically amortized over the coverage period.

The estimates used in determining the CSM include Projections of future cash flows, discount rate assumptions, risk adjustment estimates and other assumptions such as mortality, morbidity, and persistency.

Changes in these assumptions or estimates may have a significant impact on the amount of CSM recognized. The Subsidiary reviews and updates its estimates periodically, at least at each reporting date, in line with emerging experience and updated information.

Probability-weighted estimates of future cash flows

The estimates of future cash flows reflect the Subsidiary's view of current conditions at the reporting date and estimates of any relevant market variables are consistent with observable market prices.

When estimating future cash flows, the Subsidiary takes into account current expectations of future events that might affect those cash flows.

d. Kontrak asuransi (lanjutan)

Sejak tanggal 1 Januari 2025 (lanjutan)

Probability-weighted atas proyeksi arus kas masa depan (lanjutan)

Ada berbagai asumsi ekonomi dan non-ekonomi yang digunakan sebagai masukan dalam proses perkiraan arus kas masa depan, termasuk, namun tidak terbatas pada, asumsi operasional seperti morbiditas, mortalitas, persisten, dan biaya, serta asumsi ekonomi seperti *risk free rates* dan *illiquidity premium.*

Penyesuaian risiko untuk risiko non-keuangan

Pengukuran penyesuaian risiko harus mencerminkan kompensasi yang diperlukan oleh Entitas Anak untuk menanggung ketidakpastian terkait jumlah dan waktu arus kas masa depan yang timbul dari risiko non-keuangan saat Entitas Anak memenuhi kontrak asuransi.

Asumsi biaya yang digunakan dalam perkiraan arus kas masa depan

Entitas Anak memperkirakan perkiraan biaya masa depan yang berkaitan dengan pelaksanaan kontrak menggunakan tingkat biaya saat ini yang disesuaikan dengan inflasi. Sebagian besar biaya diakui sebagai biaya yang dapat diatribusikan (biaya langsung) yang terdiri dari biaya akuisisi dan pemeliharaan, kecuali biaya litigasi dan Tanggung Jawab Sosial Perusahaan (CSR) yang mana diklasifikasikan sebagai biaya yang tidak dapat diatribusikan.

Tingkat diskonto

Entitas anak akan menerapkan pendekatan *bottom-up* dengan menggunakan kurva imbal hasil yang konsisten dengan pasar berdasarkan suku bunga bebas risiko dan penerapan premi illikuiditas

Sebelum tanggal 1 Januari 2025

Liabilitas kepada pemegang polis (manfaat polis masa depan dari produk non-*unit link* dan estimasi liabilitas klaim) Entitas Anak dicatat di laporan posisi keuangan konsolidasian sebagai bagian dari liabilitas kontrak asuransi berdasarkan perhitungan aktuaris dengan menggunakan asumsi aktuarial yaitu asumsi estimasi terbaik dan marjin atas risiko pemburukan.

3. USE OF CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS *(continued)*

Key sources of estimation uncertainty *(continued)*

d. Insurance contracts *(continued)*

Since 1 January 2025 (continued)

Probability-weighted estimates of future cash flows (continued)

There is a wide range of economic and non-econoomic assumptions that are used as inputs in the future cash flows estimation process including, but not limited to, operating assumptions such as morbidity, mortality, persistency and expenses, and economic assumptions such as risk free rates and illiquidity premium.

Risk adjustment for non-financial risk

The measurement of risk adjustment should reflect the compensation required by the Subsidiary for bearing the uncertainty around the amount and timing of the future cash flows that arises from non-financial risk as the Subsidiary fulfils insurance contracts.

Expense assumption used in future cash flow estimation

The Subsidiary estimates future cost projections related to contract execution using the current cost rate adjusted for inflation. Most costs are recognized as attributable costs (direct costs) consisting of acquisition and maintenance costs, except for litigation costs and Corporate Social Responsibility (CSR) costs, which are classified as non-attributable costs.

Discount rates

The subsidiary will adopt a bottom-up approach using a market consistent yield curve based on risk free rate and applying illiquidity premium.

Before 1 January 2025

Liabilities to policyholders (future policy benefits from non-unit linked products and estimated claim liabilities) of Subsidiaries are recorded in the consolidated statement of financial position as part of insurance contract liabilities based on actuarial calculations using actuarial assumptions, which is the best estimate assumptions and margin for risk of deterioration.

The original consolidated financial statements included herein are in the Indonesian language.

3. PENGGUNAAN ESTIMASI DAN PERTIMBANGAN AKUNTANSI YANG PENTING (lanjutan)

Sumber utama ketidakpastian estimasi (lanjutan)

e. Aset pajak tangguhan

Aset pajak tangguhan diakui atas seluruh perbedaan temporer yang dapat dikurangkan, sepanjang besar kemungkinannya bahwa penghasilan kena pajak akan tersedia sehingga perbedaan temporer tersebut dapat digunakan. Estimasi signifikan oleh manajemen disyaratkan dalam menentukan jumlah aset pajak tangguhan yang dapat diakui, berdasarkan saat penggunaan dan tingkat penghasilan kena pajak serta strategi perencanaan pajak masa depan. Bank tidak memperhitungkan sebagian manfaat aset pajak tangguhan karena manajemen Bank berpendapat bahwa aset pajak tangguhan tersebut tidak dapat terpulihkan di masa yang akan datang.

f. Penyusutan dan estimasi umur manfaat aset tetap

Biaya perolehan aset tetap disusutkan dengan menggunakan metode garis lurus berdasarkan taksiran masa manfaat ekonomisnya. Manajemen Bank mengestimasi masa manfaat ekonomis aset tetap antara 4 (empat) sampai dengan 20 (dua puluh) tahun.

Perubahan tingkat pemakaian dan perkembangan teknologi dapat mempengaruhi masa manfaat ekonomis dan nilai sisa aset, dan karenanya biaya penyusutan masa depan mungkin direvisi.

Nilai tercatat atas aset tetap Bank diungkapkan pada Catatan 18.

g. Penurunan nilai aset non-keuangan

Bank Mandiri dan Entitas Anak mengevaluasi penurunan nilai aset non-keuangan apabila terdapat kejadian atau perubahan keadaan yang mengindikasikan bahwa nilai tercatat aset non-keuangan tidak dapat dipulihkan kembali. Faktor-faktor penting yang dapat menyebabkan penurunan nilai aset non-keuangan adalah sebagai berikut:

a) Performa yang tidak tercapai secara signifikan terhadap ekspektasi historis atau proyeksi hasil operasi di masa yang akan datang;
b) Perubahan yang signifikan dalam cara penggunaan aset atau strategi bisnis secara keseluruhan; dan
c) Industri atau tren ekonomi yang secara signifikan bernilai negatif.

***3. USE OF CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS** (continued)*

***Key sources of estimation uncertainty** (continued)*

e. Deferred tax assets

Deferred tax assets are recognised for all deductible temporary differences, as long as taxable income most likely will be available so that the temporary differences can be utilised. Significant estimation by management are required in determining the amount of deferred tax assets that can be recognised, based on utilisation period and the level of taxable income and future tax planning strategies. The Bank does not consider some of the benefits of deferred tax assets as management believes that those part of deferred tax assets will not be recoverable in the future.

f. Depreciation and estimated useful life of fixed assets

Cost of acquisition of fixed assets are depreciated using the straight-line method based on their estimated economic useful life. Bank's management estimates the useful lives of the fixed assets between 4 (four) to 20 (twenty) years.

Changes in the level of usage and technological developments could affect the economic useful lives and residual value of assets, and therefore future depreciation charges may be revised.

The carrying value of the Bank's fixed assets is disclosed in Note 18.

g. Impairment of non-financial assets

Bank Mandiri and its Subsidiaries assess impairment of non-financial assets whenever there are events or changes in circumstances indicate that the carrying value of non-financial assets cannot be recovered. Important factors that could cause impairment of non-financial assets are as follows:

a) Performance is not achieved significantly against historical expectations or projected operating results in the future;

b) A significant change in the way of the asset usage or the overall business strategy; and

c) Industry or economic trends are significantly negative.

The original consolidated financial statements included herein are in the Indonesian language.

Sumber utama ketidakpastian estimasi (lanjutan)

g. Penurunan nilai aset non-keuangan (lanjutan)

Manajemen Bank dan Entitas Anak mengakui kerugian penurunan nilai apabila nilai tercatat aset melebihi nilai terpulihkannya. Nilai terpulihkan adalah nilai yang lebih tinggi antara nilai wajar dikurang biaya pelepasan dengan nilai pakai aset (atau unit penghasil kas). Nilai terpulihkan diestimasi untuk aset individual atau, jika tidak memungkinkan, untuk unit penghasil kas yang mana aset tersebut merupakan bagian daripada unit tersebut.

h. Revaluasi atas nilai wajar tanah

Grup menggunakan spesialis penilai independen untuk menilai nilai wajar atas tanah. Tanah dinilai berdasarkan referensi atas bukti berdasarkan pasar, menggunakan nilai yang dapat diukur setelah disesuaikan dengan faktor pasar spesifik seperti lokasi dan kondisi dari tanah.

i. Menentukan jangka waktu kontrak dengan opsi perpanjangan dan penghentian kontrak - Grup sebagai penyewa

Grup menentukan jangka waktu sewa sebagai jangka waktu sewa yang tidak dapat dibatalkan, bersama dengan periode yang dicakup oleh opsi untuk memperpanjang masa sewa jika dipastikan akan dilaksanakan, atau periode apa pun yang dicakup oleh opsi untuk menghentikan sewa, jika cukup wajar untuk tidak dilakukan.

Grup memiliki beberapa kontrak sewa yang mencakup opsi perpanjangan dan penghentian jangka waktu sewa. Grup menerapkan penilaian dalam mengevaluasi apakah dapat dipastikan jika akan menggunakan opsi untuk memperpanjang atau menghentikan sewa. Hal tersebut dilakukan dengan mempertimbangkan seluruh fakta dan keadaan yang relevan yang memberikan insentif ekonomi untuk melakukan perpanjangan atau penghentian sewa. Setelah tanggal dimulainya, Grup menilai kembali masa sewa, jika terdapat peristiwa atau perubahan signifikan dalam keadaan yang berada dalam kendali dan mempengaruhi apakah penyewa cukup pasti untuk mengeksekusi opsi memperpanjang atau menghentikan sewa.

***g. Impairment of non-financial assets** (continued)*

The Management of the Bank and its Subsidiaries recognise an impairment loss if the carrying amount of the asset exceeds its recoverable amount. Recoverable amount is the higher value between the fair value minus costs of disposal and the value in use of the asset (or cash-generating unit). Recoverable amount is estimated for individual assets or, if not possible, for the cash-generating unit in which the asset is part of the unit.

h. Revaluations of land

The Group engaged independent valuation specialists to assess fair value of land. Lands were valued by reference to market-based evidence, using comparable prices adjusted for specific market factors such as location and condition of land.

i. Determine the contract term with options for extension and termination of the contract - the Group as lessee

The Group determines the lease term as the term of the lease that cannot be canceled, together with the period covered based on the option to extend the lease if it is determined to be exercised, or any period covered by the option to terminate the lease, if it is reasonably not to do so.

The Group has several lease contracts that include options for extension and termination of the lease terms. The Group applies its judgment in evaluating whether it is certain to exercise the option to extend or terminate the lease. This is done by considering all relevant facts and circumstances that provide economic incentives to extend or terminate the lease. After the commencement date, the Group reassesses the lease term, if there is a significant event or change in circumstances which is under its control and affects whether the lessee is certain enough to exercise the option to extend or terminate the lease.

Dengan demikian, aset keuangan dan liabilitas keuangan diakui sesuai dengan kebijakan akuntansi Bank dan Entitas Anak seperti diungkapkan pada Catatan 2.c.vi.

5. Nilai wajar tingkat 2 dari tanah dihitung dengan menggunakan pendekatan perbandingan harga pasar dan estimasi pendapatan dan biaya yang dihasilkan oleh aset. Harga pasar dari tanah yang paling mendekati disesuaikan dengan perbedaan atribut utama seperti ukuran aset, lokasi dan penggunaan aset. Input yang paling signifikan dalam pendekatan penilaian ini adalah asumsi harga per meter.

6. Hak atas tanah diperoleh berdasarkan Sertifikat Hak Milik ("SHM") dan sertifikat Hak Guna ("HGB") yang dapat diperbarui dengan masa yang akan berakhir antara 2025 sampai tahun 2053. Mengacu pada praktek di masa lampau, Group memiliki keyakinan dapat memperpanjang HGB tersebut.

7. Pada tanggal 31 Desember 2025, Bank Mandiri telah mengasuransikan aset tetap (tidak termasuk hak atas tanah, aset dalam pembangunan dan aset hak guna) untuk menutupi kemungkinan kerugian terhadap risiko kebakaran, pencurian dan bencana alam (Property All Risk (PAR), Earthquakes (EQ), Machinery Breakdown (MB), Terorisme dan Sabotase (TS).

6. Land rights are held under Ownership Title Certificates ("SHM") and renewable Right to Build Certificates ("HGB"), with expiration dates ranging from 2025 to 2053. Based on historical precedent, the Group is confident in its ability to renew the HGBs upon their expiry.

Deferred tax assets are calculated using applicable tax rate or substantially enacted tax rate at consolidated statement of financial position dates.

Manajemen berpendapat bahwa terdapat kemungkinan besar jumlah laba fiskal pada masa mendatang akan memadai untuk mengkompensasi perbedaan temporer yang menimbulkan aset pajak tangguhan tersebut.

Management believes that it is possible that future taxable income will be available to be utilised against the temporary difference, which resulted in deferred tax assets.

Penetapan modal ditempatkan dan disetor sebesar Rp4.000.000 oleh Pemerintah Republik Indonesia pada tanggal pendirian Bank Mandiri, telah dilaksanakan sebagai berikut:

1. Pembayaran secara tunai melalui Bank Indonesia sejumlah Rp1.600.004.

2. Penempatan dalam saham yang dicatat sebagai penyertaan saham pada Bank Peserta Penggabungan sejumlah Rp599.999 untuk setiap Bank atau jumlah keseluruhannya Rp2.399.996, melalui pengalihan saham milik Pemerintah Republik Indonesia pada setiap Bank Peserta Penggabungan kepada Bank Mandiri, seperti yang telah disebut dalam Rapat Umum Pemegang Saham Luar Biasa dari Bank Peserta Penggabungan. Berdasarkan perjanjian *inbreng* yang telah diaktakan dengan Akta No. 9 yang dibuat oleh Notaris Sutjipto, S.H., tanggal 2 Oktober 1998, Bank Mandiri dan Pemerintah Republik Indonesia setuju untuk mengalihkan saham-saham tersebut sebagai pembayaran untuk saham baru yang akan dikeluarkan oleh Bank Mandiri.

Berdasarkan perubahan anggaran dasar Bank Mandiri yang dituangkan dalam Akta No. 98 yang dibuat oleh Notaris Sutjipto, S.H., tanggal 24 Juli 1999, pemegang saham memutuskan untuk meningkatkan modal disetor (modal saham) Bank Mandiri dari Rp4.000.000 menjadi Rp4.251.000 dan jumlah tersebut akan dibayar oleh Pemerintah Republik Indonesia. Penambahan sebesar Rp251.000 merupakan hasil konversi dari tambahan modal disetor menjadi modal saham akibat dari adanya kelebihan obligasi rekapitalisasi yang diterbitkan dalam Program Rekapitalisasi Pertama berdasarkan Peraturan Pemerintah No. 52 Tahun 1999.

Berdasarkan keputusan RUPS-LB tanggal 29 Mei 2003 yang dituangkan dalam Akta No. 142 yang dibuat oleh Notaris Sutjipto, S.H., tanggal 29 Mei 2003, pemegang saham Bank Mandiri antara lain menyetujui:

2. Placements in shares recorded as investments in shares of the Merged Banks amounted to Rp599,999 each or totaling Rp2,399,996, through the transfer of shares of the Government of the Republic of Indonesia in each of the Merged Banks to Bank Mandiri, as resolved during the respective Extraordinary General Shareholders' Meetings of the Merged Banks. Based on the inbreng agreement approved by Notarial Deed No. 9 of Notary Sutjipto, S.H., dated 2 October 1998, Bank Mandiri and the Government of the Republic of Indonesia agreed to transfer those shares as payment for new shares to be issued by Bank Mandiri.

B. Risiko pasar dan risiko likuiditas

(i) Manajemen risiko likuiditas

Risiko likuiditas adalah risiko akibat ketidakmampuan Bank untuk memenuhi kewajiban yang jatuh tempo dari sumber pendanaan arus kas dan/atau dari aset likuid berkualitas tinggi yang dapat diagunkan, tanpa mengganggu aktivitas dan kondisi keuangan Bank.

Untuk mengukur besarnya risiko likuiditas, Bank menggunakan beberapa indikator, antara lain adalah rasio Giro Wajib Minimum ("GWM") pada Bank Indonesia dan kas, Penyangga Likuiditas Makroprudensial ("PLM"), cadangan likuiditas, Rasio Intermediasi Makroprudensial ("RIM"), *Liquidity Coverage Ratio* ("LCR"), *Net Stable Funding Ratio* ("NSFR"), dan ketergantungan terhadap pendanaan nasabah besar.

GWM adalah simpanan minimum yang wajib dipelihara oleh Bank dalam bentuk saldo rekening giro pada Bank Indonesia atau surat berharga yang besarnya ditetapkan oleh Bank Indonesia sebesar persentase tertentu dari dana pihak ketiga (DPK). PLM merupakan persentase kepemilikan surat berharga Rupiah yang dapat digunakan dalam operasi pasar terbuka, antara lain SBI, SDBI, SBN, SRBI, dan BI-FRN.

B. Market risk and liquidity risk

(i) Liquidity risk management

Liquidity risk represents the risk of Bank's inability to fulfill all financial liabilities when they become due from its financing cash flows and/or high quality liquid assets that can be pledged, without negatively impacting the Bank's activities and financial condition.

The Bank's liquidity risk is measured through several indicators, which are minimum statutory reserve ratio ("GWM") in Bank Indonesia and cash, Macroprudential Liquidity Reserve ("PLM"), liquidity reserve, Macroprudential Intermediation Ratio ("RIM"), Liquidity Coverage Ratio ("LCR"), Net Stable Funding Ratio ("NSFR"), and dependency on large customer deposits.

GWM is a minimum deposits required to be maintained by the Bank in the form of current accounts with Bank Indonesia or marketable securities in which the amount is determined by Bank Indonesia based on certain percentage from total deposits from customers. PLM is an ownership percentage in Rupiah marketable securities which can be used in open market operations i.e., SBI, SDBI, SBN, SRBI, and BI-FRN.

62. MANAJEMEN RISIKO (lanjutan)

B. Risiko pasar dan risiko likuiditas (lanjutan)

(i) Manajemen risiko likuiditas (lanjutan)

Cadangan likuiditas adalah alat likuid Bank di atas GWM dengan fungsi untuk pemenuhan kebutuhan likuiditas yang tidak terjadwal. Dalam mengelola cadangan likuiditas, Bank memiliki batasan dalam bentuk limit *safety level*, yaitu proyeksi cadangan likuiditas Bank untuk 1 bulan ke depan. Pada tanggal 31 Desember 2025, cadangan likuiditas berada di atas *safety level*.

RIM adalah rasio hasil perbandingan antara kredit yang diberikan dan surat berharga korporasi yang memenuhi persyaratan tertentu yang dimiliki bank terhadap dana pihak ketiga, surat-surat berharga yang memenuhi persyaratan tertentu yang diterbitkan oleh Bank dan pinjaman yang memenuhi persyaratan tertentu yang diterima oleh Bank. Pada tanggal 31 Desember 2025. RIM Bank Mandiri saja sebesar 84,52%.

LCR merupakan rasio antara *High Quality Liquid Assets* (HQLA) dengan estimasi total arus kas keluar bersih (*net cash outflow*) selama 30 (tiga puluh) hari ke depan dalam skenario krisis. LCR bertujuan untuk meningkatkan ketahanan likuiditas jangka pendek Bank dalam kondisi krisis. Pada tanggal 31 Desember 2025. LCR Bank Mandiri saja sebesar 137,40%.

NSFR merupakan rasio perbandingan antara pendanaan stabil yang tersedia (*available stable funding*) dengan pendanaan stabil yang diperlukan (*required stable funding*). Pada tanggal 31 Desember 2025. NSFR Bank Mandiri saja sebesar 109,95%.

Kondisi likuiditas Bank di masa mendatang diproyeksikan melalui metodologi *liquidity gap*, yang merupakan *maturity mismatch* antara komponen-komponen aset dan liabilitas (termasuk *off-balance sheet*), yang disusun ke dalam periode waktu (*time bucket*) berdasarkan *contractual maturity* ataupun *behavioral maturity*. Pada tanggal 31 Desember 2025, proyeksi likuiditas Bank sampai dengan 12 bulan ke depan berada dalam posisi surplus. Meskipun proyeksi likuiditas 12 bulan ke depan surplus, Bank selalu mempersiapkan alternatif *funding* apabila kondisi likuiditas pasar menjadi ketat atau tidak sesuai dengan prediksi Bank.

***62. RISK MANAGEMENT** (continued)*

B. Market risk and liquidity risk (continued)

(i) Liquidity risk management (continued)

Liquidity reserve is the Bank's liquidity on top of GWM to anticipate unscheduled liquidity needs. In managing the liquidity reserve, Bank has liquidity reserve limit in the form of safety level limit, which represents the Bank's liquidity reserve projection for one following month. As of 31 December 2025, the liquidity reserve balance is above the safety level.

RIM is a ratio of loans and qualified marketable securities owned by the Bank to the customer deposits. qualified debt securities issued by the Bank and qualified borrowing received by the Bank. As of 31 December 2025. The Banks's RIM is 84.52%.

LCR is a ratio between High Quality Liquid Assets (HQLA) with the estimation of total net cash outflow for the next 30 (thirty) days under a crisis scenario. LCR is used to improve the short-term liquidity of the Bank under a crisis conditions. As of 31 December 2025. The Bank's LCR is 137.40%.

NSFR is a ratio comparing the available stable funding to required stable funding. As of 31 December 2025. The Bank's NSFR is 109.95%.

The Bank uses liquidity gap methodology to project its liquidity conditions for the future. Liquidity gap is basically a maturity mismatch between components of assets and liabilities (including off-balance sheet), which are classified into time bucket based on their contractual maturity or behavioral maturity. As of 31 December 2025, the Bank's liquidity forecast up to next 12 months is at a surplus position. Even in the surplus position for the next 12 months, the Bank always prepares for alternative funding to anticipate tight liquidity in the market or the liquidity is not as expected.

62. MANAJEMEN RISIKO (lanjutan)

B. Risiko pasar dan risiko likuiditas (lanjutan)

(i) Manajemen risiko likuiditas (lanjutan)

Untuk mengetahui dampak perubahan faktor pasar maupun faktor internal pada kondisi ekstrim (krisis) terhadap kondisi likuiditas, Bank melakukan *stress testing* risiko likuiditas secara berkala. Hasil *stress testing* yang dilakukan telah dipaparkan kepada Manajemen. Hasil *stress testing* menunjukkan bahwa Bank dapat bertahan pada kondisi krisis likuiditas.

Meskipun hasil *stress testing* menunjukkan bahwa risiko likuiditas dapat dikelola dengan baik, Bank memiliki *Liquidity Contingency Plan* (LCP) yang meliputi strategi pendanaan dan strategi *pricing* dalam kondisi krisis, antara lain pinjaman pasar uang, *repo*, pinjaman bilateral, FX *swap* dan *wholesale funding*. Dalam LCP, penetapan kondisi likuiditas dan strategi-strategi pendanaan telah mempertimbangkan kondisi internal dan eksternal.

Dalam rangka mengantisipasi timbulnya risiko likuiditas akibat adanya perubahan faktor ekonomi global, Bank Mandiri memonitor indikator - indikator eksternal di antaranya: indONIA, suku bunga kebijakan Bank Indonesia (BI Rate), *yield* SUN 10 tahun, *outstanding* likuiditas perbankan Rupiah, Indeks Harga Saham Gabungan (IHSG), *rate interbank call money*, *yield* UST 10 tahun, nilai tukar USD/IDR, *Credit Default Swap* (CDS) 5 tahun Indonesia, serta informasi pasar terkini.

Pelaporan jatuh tempo pada tanggal 31 Desember 2025 dan 2024, didasarkan pada jangka waktu yang tersisa sejak tanggal-tanggal tersebut. Secara historis, terdapat bagian dari simpanan dalam jumlah yang cukup besar yang diperpanjang pada saat jatuh tempo. Selain itu, jika terdapat keperluan likuiditas, obligasi pemerintah (portofolio diukur pada nilai wajar melalui laba rugi dan tersedia untuk dijual diukur pada nilai wajar melalui penghasilan komprehensif lain) dapat dicairkan dengan menggunakannya sebagai jaminan dalam pasar antar bank.

***62. RISK MANAGEMENT** (continued)*

B. Market risk and liquidity risk (continued)

(i) Liquidity risk management (continued)

To determine the impact of changes in market factors and internal factors under extreme conditions (crisis) to the liquidity, the Bank conducts stress testing of liquidity risk on a regular basis. The results of stress testing performed was presented to the Management. The stress testing result showed that the Bank will be able to survive under liquidity crisis conditions.

Although the stress testing result showed liquidity risk is well managed, Bank has Liquidity Contingency Plan (LCP) in crisis condition which covers funding strategy and pricing strategy including money market borrowing, repo, bilateral borrowing, FX swap and wholesale funding. In LCP, determination of liquidity situations and funding strategies have considered internal and external conditions.

To anticipate liquidity risks due to volatility of global economic condition, Bank Mandiri monitors external indicators, including indONIA, BI Rate, 10-years SUN Yield, Rupiah Banking Liquidity Outstanding, Composite Stock Price Index (IHSG), Rate Interbank Call Money, 10-years UST Yield, USD/IDR Exchange Rate, Indonesia's 5-years Credit Default Swap (CDS) and the current market informations.

The maturity profile as of 31 December 2025 and 2024 are based on the remaining period from these dates. Historically, there were a large portion of deposits to be renewed upon maturity. In addition, if there is a need for liquidity, Government bonds (at fair value through profit or loss and fair value through other comprehensive income) can be exercised by utilising as collateral in interbank market.

(ii) Manajemen risiko suku bunga *portfolio banking book*

Risiko pasar adalah risiko pada posisi neraca dan rekening administratif, termasuk transaksi derivatif, akibat perubahan secara keseluruhan dari kondisi pasar, termasuk risiko perubahan harga *option*.

Pengelolaan risiko pasar *banking book* dilakukan dengan mengoptimalkan struktur laporan posisi keuangan Bank untuk mendapatkan imbal hasil yang maksimal sesuai tingkat risiko yang dapat diterima Bank. Pengendalian risiko pasar *banking book* dilakukan dengan menetapkan *limit* yang mengacu pada ketentuan Regulator dan internal yang dimonitor secara mingguan maupun bulanan oleh *Market Risk Management Unit*.

(ii) Interest rate risk management on banking book portfolio

The monitoring of market risk on banking book is performed by setting a limit which is refer to the regulator requirements and the internal policies, which are monitored on a weekly and monthly basis by the Market Risk Management Unit.

62. MANAJEMEN RISIKO (lanjutan)

B. Risiko pasar dan risiko likuiditas (lanjutan)

(ii) Manajemen risiko suku bunga *portfolio banking book* (lanjutan)

Sumber risiko suku bunga *banking book* adalah *repricing risk* (*repricing mismatch* antara komponen aset dan liabilitas), *basis risk* (penggunaan suku bunga acuan yang berbeda), *yield curve risk* (perubahan bentuk dan *slope yield curve*) dan *option risk* (pelunasan kredit atau pencairan deposito sebelum jatuh tempo). Bank menggunakan *repricing gap* dan melakukan *sensitivity analysis* guna memperoleh proyeksi perubahan *Net Interest Income* ("NII").

62. MANAJEMEN RISIKO (lanjutan)

B. Risiko pasar dan risiko likuiditas (lanjutan)

(ii) Manajemen risiko suku bunga *portfolio banking book* (lanjutan)

Untuk mengetahui dampak perubahan suku bunga dan nilai tukar pada kondisi ekstrim (krisis) terhadap pendapatan dan modal, Bank melakukan *stress testing* risiko pasar *banking book* secara berkala.

(iii) Manajemen *pricing*

Bank menerapkan kebijakan *pricing* baik untuk produk dana maupun produk kredit. Kebijakan *pricing* merupakan salah satu strategi untuk memaksimalkan *Net Interest Margin* ("NIM") dan sekaligus mendukung Bank menguasai *market share* dengan mempertimbangkan kondisi persaingan.

Bank secara konsisten berupaya menerapkan strategi sebagai *market leader* dalam hal *pricing* pendanaan. Namun demikian, dengan mempertimbangkan kondisi likuiditas dan kebutuhan dana, Bank dapat menerapkan strategi agresif (lebih besar dari pesaing utama) atau defensif (sama atau lebih kecil dari pesaing utama).

Dalam menetapkan suku bunga kredit, Bank menerapkan *risk based pricing* yaitu pemberian suku bunga kredit kepada nasabah bervariasi berdasarkan tingkat risiko kreditnya. Dalam rangka meminimalkan risiko suku bunga, maka suku bunga kredit disesuaikan dengan suku bunga sumber dana pembiayaan. Selain biaya dana, suku bunga kredit ditetapkan dengan mempertimbangkan biaya *overhead*, premi risiko kredit dan marjin keuntungan Bank dengan tetap memperhatikan *competitiveness* dengan pesaing utama. Suku bunga kredit dapat berupa suku bunga mengambang (*floating rate*) atau suku bunga tetap (*fixed rate*) untuk tenor tertentu.

Risiko nilai tukar adalah potensi kerugian yang timbul akibat pergerakan nilai tukar di pasar yang berlawanan pada saat Bank memiliki posisi terbuka. Bank menerapkan manajemen risiko nilai tukar yang memadai sehingga terhindar dari kerugian akibat perubahan atau volatilitas nilai tukar. Risiko nilai tukar berasal dari transaksi valuta asing dengan nasabah atau *counterparty* yang menyebabkan posisi terbuka dalam valuta asing maupun posisi struktural dalam valuta asing akibat penyertaan modal. Bank mengelola risiko nilai tukar dengan melakukan pemantauan dan pengelolaan Posisi Devisa Neto ("PDN") sesuai dengan limit internal dan ketentuan Bank Indonesia.

***62. RISK MANAGEMENT** (continued)*

B. Market risk and liquidity risk (continued)

(ii) Interest rate risk management on banking book portfolio (continued)

To assess the impact of changes in interest rates and exchange rates at extreme conditions (crisis) to earnings and capital, the Bank conducts stress testing on the market risk of banking book regularly.

(iii) Pricing management

The Bank implements pricing policy for loans or deposit products. The pricing policy is one of the Bank's strategy to maximise Net Interest Margin ("NIM") and to support the Bank to dominate the market share by considering the competition condition.

The Bank consistently manages to apply the strategy as market leader in terms of fund pricing. However, considering the liquidity conditions and funding needs, the Bank may implement an aggressive strategy (greater than major competitors) or defensive (equal to or smaller than major competitors).

In determine interest rates, the Bank implements risk-based pricing by providing a range of interest rate of loan to customers based on credit risk level. In order to minimize interest rate risk, the loan interest rate is adjusted with interest rate from cost of funds. Other than cost of funds, loan interest rates are determined with consideration to overhead costs, credit risk premiums and profit margins as well as taking into account the Bank's competitiveness with its major competitors. Interest rates for loan can be either a floating or a fixed rate for certain tenors.

Exchange rate risk represents potential loss arising from unfavourable exchange rate movements in the market when the Bank has an open position. The Bank applies a proper foreign exchange risk management to avoid loss arising from exchange rate changes or volatility. Exchange rate risk arises from foreign exchange currency transactions with customer or counterparty which leads to an open position in foreign currency or structural positions in foreign currencies due to capital investment. The Bank manages exchange rate risk by monitoring and managing the Net Open Position ("NOP") in accordance with internal limits and the regulation of Bank Indonesia.

- *Inputs other than quoted market prices included in Level 1 that are observable for the asset and liability, either directly (as a price) or indirectly (derived from prices) (Level 2);*
- *Inputs for the asset or liability that are not based on observable market data (unobservable information) (Level 3).*

62. MANAJEMEN RISIKO (lanjutan)

B. Risiko pasar dan risiko likuiditas (lanjutan)

(v) Nilai wajar aset dan liabilitas keuangan (lanjutan)

Suatu pasar dianggap aktif apabila informasi mengenai kuotasian dapat dengan mudah dan secara berkala tersedia dari suatu bursa, pedagang efek, atau *broker*, kelompok penilai harga pasar industri tertentu, regulator dan harga-harga tersebut mencerminkan transaksi pasar yang aktual dan reguler pada tingkat yang wajar. Harga pasar kuotasian untuk aset keuangan yang dimiliki Grup adalah harga penawaran sekarang. Instrumen-instrumen tersebut termasuk dalam Tingkat 1. Instrumen yang termasuk dalam Tingkat 1 umumnya meliputi investasi ekuitas dan surat hutang terdaftar di Bursa Efek Indonesia yang diklasifikasikan sebagai surat berharga yang diukur pada nilai wajar melalui laba rugi dan nilai wajar melalui penghasilan komprehensif lain.

Nilai wajar instrumen keuangan yang tidak diperdagangkan pada pasar aktif (meliputi derivatif *over the counter* dan obligasi pemerintah yang tidak aktif) ditentukan dengan teknik penilaian internal.

Teknik-teknik penilaian tersebut memaksimumkan penggunaan data pasar yang dapat diobservasi dan sedapat mungkin meminimalisir penggunaan estimasi yang bersifat spesifik dari entitas. Seluruh input yang dibutuhkan untuk menentukan nilai wajar instrumen keuangan dapat diobservasi dari pasar, oleh karena itu instrumen tersebut termasuk dalam Tingkat 2. Sebaliknya, jika salah satu atau lebih data tidak didasarkan pada data pasar yang dapat diobservasi, instrumen ini termasuk dalam Tingkat 3.

Nilai tercatat dari aset dan liabilitas keuangan Bank Mandiri memiliki nilai yang hampir sama dengan nilai wajarnya kecuali untuk instrumen berikut:

***62. RISK MANAGEMENT** (continued)*

B. Market risk and liquidity risk (continued)

(v) Fair value of financial assets and liabilities (continued)

A market is considered active if the information regarding price quotations can be easily obtained and regularly available from an exchange, securities dealer or broker, the market price of a particular industry assessors, regulators and those price reflects actual and regular market transactions at a fair value. Quoted market price for financial assets owned by the Group are using current offering price. These instruments are included in Level 1. The instruments included in Level 1 generally include investments in shares in IDX and debt securities classified as held for trading and fair value through other comprehensive income.

The fair value of financial instruments that are not traded in an active market (include over-the-counter derivatives and inactive government bonds) are determined by internal valuation techniques.

The valuation techniques maximise the use of observable market data when available and as far as possible to minimise the use of specific estimates of the entity. If all the inputs needed to determine the fair value of financial instruments are observable from market, therefore the instrument is included in Level 2. Instead, if one or more data is not based on observable market data, these instrument are included in Level 3.

The carrying value of the Bank's financial assets and liabilities approximates their fair value except for the following financial instruments:

(i) Giro pada Bank Indonesia, giro pada bank lain, penempatan pada Bank Indonesia dan bank lain, tagihan lainnya - transaksi perdagangan, tagihan atas efek-efek yang dibeli dengan janji dijual kembali, tagihan akseptasi dan aset lain-lain (lanjutan)

Nilai tercatat dari giro pada Bank Indonesia dan bank lain, penempatan *overnight* dengan suku bunga mengambang adalah perkiraan yang layak atas nilai wajar.

Estimasi nilai wajar terhadap penempatan dengan suku bunga tetap, tagihan lainnya - transaksi perdagangan, tagihan atas efek-efek yang dibeli dengan janji dijual kembali, tagihan akseptasi dan aset lain-lain ditetapkan berdasarkan diskonto arus kas dengan menggunakan suku bunga pasar uang yang berlaku untuk utang dengan risiko kredit dan sisa jatuh tempo yang serupa. Dikarenakan sisa jatuh tempo di bawah satu tahun, nilai tercatat dari penempatan dengan suku bunga tetap, tagihan lainnya - transaksi perdagangan, tagihan atas efek-efek yang dibeli dengan janji dijual kembali, tagihan akseptasi dan aset lain-lain adalah perkiraan yang layak atas nilai wajar.

(ii) Efek-efek dan obligasi pemerintah (diukur pada biaya perolehan dan biaya perolehan diamortisasi)

Nilai wajar untuk efek-efek dan obligasi pemerintah yang diukur pada biaya perolehan dan biaya perolehan diamortisasi ditetapkan berdasarkan harga pasar atau harga kuotasi perantara (*broker*)/pedagang efek (*dealer*). Jika informasi ini tidak tersedia, nilai wajar diestimasi dengan menggunakan harga pasar kuotasi efek yang memiliki karakteristik kredit, jatuh tempo dan *yield* yang serupa atau dinilai dengan menggunakan metode valuasi internal.

(v) Fair value of financial assets and liabilities (continued)

(i) Current accounts with Bank Indonesia, current accounts with other banks, placement with Bank Indonesia and other banks, other receivables - trading transactions, securities purchased under agreements to resell, acceptance receivables and other assets (continued)

The carrying amount of current accounts with Bank Indonesia and other banks, placements and overnight deposits, which uses floating rate, is a reasonable approximation of fair value.

Since the remaining maturity is below one year, the carrying amount of fixed interest bearing placements, other receiveables - trading transactions, securities purchased under agreements to resell, acceptance receivables and other assets is a reasonable approximation of fair value.

(ii) Marketable securities and government bonds (measured at cost and amortised cost)

The fair value for marketable securities and goverment bonds measured at cost and amortised cost is determined based on market prices or intermediary (broker)/dealer quotes. If this information is not available, the fair value is estimated using market prices of similar credit, maturity and yield securities or evaluated using internal valuation methods.

Estimasi nilai wajar dari kredit yang diberikan dan piutang/pembiayaan syariah, piutang pembiayaan konsumen serta investasi bersih dalam sewa pembiayaan mencerminkan jumlah diskonto dari estimasi kini dari arus kas masa depan yang diharapkan akan diterima. Nilai wajar dari kredit yang diberikan dan piutang/pembiayaan syariah, piutang pembiayaan konsumen serta investasi bersih dalam sewa pembiayaan ditentukan dengan mendiskontokan arus kas yang diharapkan pada tingkat suku bunga pasar terkini.

(viii) Dampak Reformasi Acuan Suku Bunga

a. LIBOR

Pada tahun 2017, *Financial Conduct Authority* (FCA) Inggris mengumumkan rencana untuk menghentikan penggunaan LIBOR pada akhir tahun 2020. Pada November 2020, ICE *Benchmark Administration* (IBA) mengumumkan secara resmi rencana untuk menghentikan publikasi suku bunga acuan LIBOR. Sebagai tanggapan atas kondisi terbaru, pada tanggal 5 Maret 2021, FCA mengumumkan rencana penundaan sebagian penghentian publikasi suku bunga acuan LIBOR oleh IBA tersebut yang telah diadakan dalam 2 (dua) tahap sebagai berikut:

1. Pada tanggal 31 Desember 2021 untuk suku bunga acuan LIBOR semua tenor dalam mata uang GBP, EUR, CHF dan JPY serta dalam mata uang USD untuk tenor 1 (satu) minggu dan 2 (dua) bulan.
2. Pada tanggal 31 Desember 2023 untuk suku bunga acuan LIBOR dalam mata uang USD untuk tenor *overnight*, 1 (satu) bulan, 3 (tiga) bulan, 6 (enam) bulan dan 12 (dua belas) bulan.

Eksposur risiko Bank yang secara langsung terdampak dari reformasi acuan suku bunga terdiri dari *portfolio* kredit korporasi, transaksi derivatif dan *borrowing* yang menggunakan suku bunga acuan USD LIBOR.

Saat ini Bank telah menggunakan suku bunga acuan *Secured Overnight Financing Rate* (SOFR) atau suku bunga acuan lain yang disepakati untuk menggantikan suku bunga acuan USD LIBOR. Terkait suku bunga acuan SOFR, terdapat beberapa perbedaan antara USD LIBOR dan SOFR. USD LIBOR adalah "*term rate*", yang berarti USD LIBOR dipublikasikan untuk beberapa periode pinjaman (sebagai contoh 3 (tiga) bulanan atau 6 (enam) bulanan) dan bersifat "*forward looking*" (LIBOR dipublikasikan pada awal periode), sedangkan SOFR merupakan suku bunga acuan yang bersifat "*backward looking*", berdasarkan suku bunga *overnight* dari transaksi *actual*, dan dipublikasikan pada akhir periode *overnight*.

(viii) Impact of Interest Rate Benchmark Reform

a. LIBOR

In 2017, the UK Financial Conduct Authority (FCA) announced plans to stop using LIBOR by the end of 2020. In November 2020, the ICE Benchmark Administration (IBA) officially announced plans to stop publishing the LIBOR benchmark interest rate. In response to the latest conditions, on 5 March 2021, FCA announced a plan to partially suspend the publication of the LIBOR benchmark interest rate by the IBA which has held in 2 (two) stages as follows:

1. *As of 31 December 2021, the reference interest rate is LIBOR for all tenors in GBP, EUR, CHF and JPY and in USD for 1 (one) week and 2 (two) months tenors.*
2. *On 31 December 2023, the reference interest rate is LIBOR in USD for the overnight tenor, 1 (one) month, 3 (three) months, 6 (six) months and 12 (twelve) months.*

The Bank's risk exposures that are directly affected by the interest rate benchmark reform consist of a portfolio of corporate loans, derivative transactions and borrowing using the USD LIBOR benchmark interest rate.

Currently, the Bank has used to use the Secured Overnight Financing Rate (SOFR) benchmark interest rate or other agreed benchmark interest rate to replace the USD LIBOR benchmark interest rate. Regarding the SOFR benchmark interest rate, there are several differences between USD LIBOR and SOFR. USD LIBOR is the "term rate", which means that USD LIBOR is published for several loan periods (for example 3 (three) months or 6 (six) months) and is "forward looking" (LIBOR is published at the beginning of the period), while SOFR is the rate "backward-looking" benchmark interest rate, based on the overnight interest rate of actual transactions, and published at the end of the overnight period.

(viii) Dampak Reformasi Acuan Suku Bunga (lanjutan)

a. LIBOR (lanjutan)

Selain itu, LIBOR merupakan tingkat suku bunga yang telah memperhitungkan *credit spread*, sementara SOFR saat ini adalah suku bunga yang hampir *risk free* berdasarkan transaksi pasar *repurchase agreement* (repo) US Treasury.

Untuk melakukan transisi atas kontrak dan perjanjian yang saat ini mengacu ke USD LIBOR menjadi mengacu ke suku bunga acuan alternatif (SOFR), diperlukan penyesuaian untuk memastikan bahwa kedua suku bunga acuan tersebut secara ekonomis setara.

Dari segi manajemen risiko pasar, Bank telah mengidentifikasi dan mengantisipasi perubahan yang terjadi pada aspek - aspek antara lain perubahan *market data*, yang selanjutnya berdampak pada hasil perhitungan *mark to market*, perhitungan dan monitoring VaR, dan perhitungan lain - lain terkait risiko pasar. Terhadap perubahan-perubahan yang terjadi tersebut, Bank telah melakukan penyesuaian pada sistem manajemen risiko pasar dan ketentuan internal terkait, serta telah melaporkan realisasi *enhancement* pada sistem ke regulator. Pada tahun 2024, seluruh transaksi derivatif *treasury* dengan mata uang USD telah menggunakan USD SOFR sebagai suku bunga acuannya.

Dalam hal kaitannya dengan risiko likuiditas, perubahan atas suku bunga acuan LIBOR menjadi suku bunga acuan alternatif lain juga dapat berdampak pada kondisi likuiditas Bank. Dalam hal ini, perubahan nominal pembayaran bunga kredit, transaksi derivatif dan/atau bunga pinjaman dapat berpengaruh pada nilai arus kas yang diterima atau dibayarkan oleh Bank, antara lain yang terukur dalam indikator *Liquidity Coverage Ratio* (LCR) dan *Net Stable Funding Ratio* (NSFR). Namun demikian, dampak tersebut diperkirakan tidak signifikan mempengaruhi kondisi likuiditas Bank secara keseluruhan.

Sebagai bentuk mitigasi risiko pasar, per posisi 31 Desember 2025 dan 2024, Bank telah mengidentifikasi kebutuhan perubahan pada sistem informasi dan Bank telah melakukan penyesuaian pada sistem tersebut. Bank juga telah melakukan kajian yang dibutuhkan dalam proses transisi terkait proses dan model valuasi instrumen keuangan.

B. Market risk and liquidity risk (continued)

(viii) Impact of Interest Rate Benchmark Reform (continued)

a. LIBOR (continued)

In addition, LIBOR is an interest rate that has taken into account credit spreads, while SOFR is currently an almost risk free interest rate based on US Treasury repurchase agreement (repo) market transactions.

In order to make the transition of contracts and agreements that currently refer to USD LIBOR to refer to the alternative benchmark interest rate (SOFR), adjustments are needed to ensure that the two benchmark interest rates are economically equivalent.

In terms of market risk management, the Bank has identified and anticipated changes that occured in aspects including changes in market data, which in turn will have an impact on the results of the mark to market calculation, VaR calculation and monitoring, and other calculations related to market risk. With regard to these changes, the Bank has made adjustments to the market risk management system and has reported system enhancement realisation to the regulator. In 2024, all treasury derivative transactions with USD currency have used USD SOFR as benchmark interest rate.

In terms of liquidity risk, changes in the LIBOR benchmark interest rate to another alternative benchmark interest rate may also have an impact on the Bank's liquidity condition. In this case, changes in the nominal payment of credit interest, derivative transactions and/or loan interest may affect the value of cash flows received or paid by the Bank, including those measured in the Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR) indicators. However, this impact is not expected to significantly affect the Bank's overall liquidity condition.

As a form of market risk mitigation, as of 31 December 2025 and 2024, the Bank has identified the need for changes to the information system and the Bank has made adjustments to the system. The Bank has also conducted studies needed in the transition process related to the process and model of the valuation of financial instruments.

Bank telah mengidentifikasi area yang memiliki risiko yang signifikan terhadap penghentian USD LIBOR, yaitu melakukan pengembangan pada sistem informasi dan penyesuaian proses bisnis untuk dapat mengakomodasi penggunaan suku bunga acuan alternatif, melakukan amendemen kontrak/*repapering* dan/atau melakukan kajian *fallback clause* pada kontrak *existing*.

Selain melakukan usaha berkelanjutan dalam pemantauan kondisi terkini terkait transisi USD LIBOR, Bank juga telah melakukan diskusi lebih intensif dengan pelaku industri baik yang berasal dari dalam maupun luar negeri dalam rangka *benchmark* serta komunikasi dengan Regulator untuk memastikan transisi perubahan suku bunga acuan dari USD LIBOR ke suku bunga acuan alternatif berjalan dengan baik, sekaligus meminimalisasi risiko yang muncul dari proses transisi tersebut.

In 2023, the Bank has communicated with affected counterparties and/or customers to provide the latest information regarding changes that may occur as a result of the reform of the interest rate reference, specifically USD LIBOR, either through socialization, discussion or in writing. The Bank has identified areas that have a significant risk of discontinuing USD LIBOR, namely developing information systems and adjusting business processes to accommodate the use of alternative reference interest rates, conducting contract amendments/repapering and/or reviewing fallback clauses on existing contracts.

In addition to carrying out continuous efforts in monitoring the latest conditions related to the USD LIBOR transition, the Bank has also conducted more intensive discussions with industry players both from within and outside the country in the context of benchmarking and communication with Regulators to ensure the transition of changes in the benchmark interest rate from USD LIBOR to alternative interest rates went well, also to minimize the risk arising from the transition process.

b. JIBOR (lanjutan)

Exposure risiko Bank yang secara langsung terdampak dari reformasi acuan suku bunga terdiri dari portofolio kredit, derivatif, surat berharga dan penggunaan lainnya (seperti *trade finance*) yang menggunakan suku bunga acuan JIBOR.

Terkait suku bunga acuan IndONIA, terdapat beberapa perbedaan antara JIBOR dan IndONIA. JIBOR adalah "*term rate*", yang berarti JIBOR dipublikasikan untuk beberapa periode pinjaman (sebagai contoh 3 (tiga) bulanan atau 6 (enam) bulanan) dan bersifat "*forward looking*" (JIBOR dipublikasikan pada awal periode), sedangkan indONIA merupakan suku bunga acuan yang bersifat "*backward-looking*", berdasarkan suku bunga *overnight* dari transaksi *actual*, dan dipublikasikan pada akhir periode *overnight*. Selain itu, JIBOR merupakan tingkat suku bunga yang menggunakan metode perhitungan *simple average* (dengan *trimming* 15% *highest* dan 15% *lowest*) dan *in-advance* (*forward looking*), sementara indONIA menggunakan metode perhitungan *volume weighted average* (rata-rata tertimbang berdasarkan volume) dan *compounded in-advance, compounded in-arrears* atau *hybrid.* Untuk melakukan transisi atas kontrak dan perjanjian yang saat ini mengacu ke JIBOR menjadi mengacu ke suku bunga acuan alternatif, diperlukan penyesuaian untuk memastikan bahwa kedua suku bunga acuan tersebut secara ekonomis setara.

Bank akan secara berkelanjutan menilai risiko yang akan timbul dari transisi JIBOR dimaksud.

b. JIBOR (continued)

The Bank's risk exposures that are directly affected by the interest rate benchmark reform consists of credit portfolios, derivatives, securities and other uses (such as trade finance) using the JIBOR benchmark interest rate.

Regarding the IndONIA benchmark interest rate, there are several differences between JIBOR and IndONIA. JIBOR is a "term rate", which means JIBOR is published for several loan periods (for example 3 (three) months or 6 (six) months) and is "forward looking" (JIBOR is published at the beginning of the period), while indONIA is a "backward-looking" benchmark interest rate, based on the overnight interest rate of actual transactions, and is published at the end of the overnight period. In addition, JIBOR is an interest rate that uses a simple average calculation method (with trimming 15% highest and 15% lowest) and in-advance (forward looking), while indONIA uses a volume weighted average calculation method (weighted average based on volume) and compounded in-advance, compounded in-arrears or hybrid. In order to make the transition from contracts and agreements that currently refer to JIBOR to referring to alternative benchmark interest rates, adjustments are needed to ensure that the two benchmark interest rates are economically equivalent.

Currently, the Bank continues to monitor the latest developments related to the JIBOR transition and plans to engage in more intensive discussions with industry players and regulators to ensure a smooth transition from JIBOR to an alternative benchmark interest rate, as well as to minimize the risks associated with the transition process. The Bank will continuously assess the potential risks arising from the JIBOR transition.

KI indicates the probability that a risk will occur (risk based) or indicates the probability that a control is not implemented properly (control based). KI is set a threshold and its realization score is recorded periodically.

(iv) Issue & Action Management (IAM), is a tool to monitor follow-up action that have been designed on identified issues through various activities, such as Control Testing, incident, key indicator monitoring result, self identified issued and other.
